FOREWORD

The Rwanda Basic Education Board is honoured to present the syllabus for Economics (S4-S6). It serves both as an official document and as a guide to competence-based teaching and learning of Economics in the advanced level. The syllabus ensures consistency and coherence in the delivery of quality education across all advanced levels of Stream two: Mathematics, Physics, Economics and Geography (MPEG).

The Rwandan education philosophy aims to ensure that young people at every level of education achieve their full potential in relevant knowledge, skills, and appropriate attitudes, preparing them to be well integrated into society and to access employment opportunities.

In line with efforts to improve the quality of education, the Government of Rwanda emphasizes the importance of aligning the syllabus, teaching and learning, and assessment approaches to ensure that the system produces the kind of citizens the country needs. Many factors influence what Learners learn, how well they learn, and the competences they acquire. They include the relevance of the syllabus, the quality of teachers' pedagogical approaches, the assessment strategies and the instructional materials available. The ambition to develop a knowledge-based society and the growth of regional and global competition in the job market has necessitated the shift to a competence-based syllabus. With the help of the teachers, whose role is central to the success of the syllabus, learners will gain appropriate skills and be able to apply what they have learned in real-life situations. Hence, they will make a difference not only to their own lives but also to the success of the nation.

I wish to sincerely extend my appreciation to the people who contributed to the development of this document, particularly the REB staff who organized the whole process from its inception. Special appreciation goes to the development partners who supported the exercise throughout. Any comment of contribution would be welcome for the improvement of this syllabus.

Dr MBARUSHIMANA Nelson

Director General REB

ACKNOWLEDGEMENTS

I wish to sincerely extend my special appreciation to the people who played a major role in the development and adaptation of the Economics syllabus. It would not have been successful without the participation of a range of education stakeholders and the financial support from different donors. For this, I would like to express my deep gratitude.

My thanks firstly go to the Rwanda Basic Education Board leadership, who supervised the curriculum review process, and the Rwanda Basic Education Board staff who were involved in the adaptation of the Economics syllabus.

Special thanks go to the Rwanda Basic Education Board (REB) staff, subject experts, university lecturers, and teachers for their valuable work in the adaptation of this syllabus. I am also grateful to all our education development partners whose support was instrumental throughout the process.

MURUNGI Joan

Head of Curriculum, Teaching and Learning Resources Department

1. Introduction

1. Introduction

1.1 Background of the Economics Syllabus Review

The revised competence-based Economics curriculum for Rwanda's upper secondary schools is designed to strengthen students' ability to analyze, interpret, and apply economic principles in real-life contexts. It equips students with up-to-date knowledge, transferable skills, and values that enable them to address everyday economic challenges and contribute meaningfully to national development.

Economics, as a social science, examines how societies allocate scarce resources to meet unlimited wants. It emphasizes interdependence, rational decision-making, and balanced consumption patterns, while fostering critical thinking and problem-solving. The syllabus revision marks a shift from knowledge transmission to competence development, ensuring that teaching and learning are participatory, practical, and aligned with Rwanda's socio-economic priorities.

1.2 Rationale for Teaching and Learning Economics

1.2.1 Economics and Society

Economics provides a framework for understanding how choices about resource allocation affect well-being at individual, community, national, and global levels. It empowers citizens to make informed decisions that enhance the quality of life, promote sustainable development, and strengthen resilience in the face of economic challenges.

1.2.2 Economics and the Student

For students, Economics is both a career pathway and a life skill. It prepares students for diverse fields such as entrepreneurship, business management, accounting and finance, marketing, tourism, statistics, international

trade and policy, agricultural economics, environmental economics, and development studies. Beyond career readiness, it cultivates the ability to communicate effectively using economic concepts, models, and tools.

The syllabus is explicitly aligned with Vision 2050, NST1, NST2, and the Education Sector Strategic Plan (ESSP). It aims to nurture a holistic Rwandan graduate who demonstrates:

- Environmental stewardship and community responsibility
- Critical thinking and independent problem-solving using science and technology
- Positive work ethic and accountability
- Creativity and innovation in economic and entrepreneurial ventures
- Social cohesion and democratic values, rooted in human rights and equity

Anchored in UNESCO's **Four Pillars of Learning**—*learning to know, learning to do, learning to be, and learning to live together*—the curriculum promotes responsible citizenship and prepares students to engage in both regional and global economic dialogues.²

1.3 Missing and Intended REB-Oriented Additions

To fully meet REB standards and ensure curriculum coherence, the following elements must be explicitly integrated:

1. **Competency Framework:** Core Competences , performance indicators, and grade-level targets for each unit.
2. **Assessment Plan:** Clear formative and summative strategies, rubrics, and frequency of evaluation.
3. **Curriculum Materials:** Recommended textbooks, digital resources, and teacher guides.
4. **Teacher Development:** Pre-service and in-service training requirements, continuous professional development.

5. **Resource Implications:** Costing estimates, classroom materials, ICT facilities, and practical tools.
6. **Policy Alignment:** Explicit links to Vision 2050, NST1/NST2, ESSP, and governance education.
7. **Inclusion and Equity:** Strategies for gender equality, inclusive education, and support for students with special needs.
8. **Monitoring and Evaluation:** Feedback loops, review timelines, and impact metrics for curriculum effectiveness.

By **Conclusion**, the revised Economics syllabus is a transformative tool for producing economically literate, critically minded, and socially responsible students. It emphasizes practical application, analytical skills, and values-based learning, ensuring that graduates can respond to Rwanda's economic realities while contributing to sustainable development and global competitiveness.

1.2.3 Competence

A **competence** is the demonstrated ability to perform tasks successfully by integrating **knowledge, skills, attitudes, and values**. In the Economics curriculum, Competences are expressed through **broad subject competences** and **yearly unit objectives**, guiding teachers to design tasks that progressively build students' mastery and independence.

Generic Competences

- Critical Thinking & Problem Solving: Apply logical reasoning, creativity, and evidence-based analysis to evaluate options and generate solutions in real-world contexts.
- Creativity & Innovation: Initiate and develop original ideas, concepts, and entrepreneurial ventures beyond classroom content.
- Research & Inquiry: Locate, interpret, and apply diverse sources of information to explain economic phenomena and support decision-making.

Communication & Social Competences

- **Language of Instruction:** Use clear, confident oral and written communication, applying precise economic vocabulary and concepts.
- **Cooperation & Life Skills:** Collaborate effectively in teams, uphold ethical values, respect diversity, and practice environmental stewardship, health, hygiene, and nutrition.

Lifelong Learning Competences

- Demonstrate autonomy in updating knowledge with minimal external support.
- Adapt to evolving knowledge systems for personal growth, professional advancement, and civic participation.

Economics Broad Competences

- Identify, interpret, and apply **core economic concepts and principles**.
- Evaluate economic issues affecting workers, consumers, and citizens at local, national, and global levels.
- Contribute meaningfully to informed discussions on Rwanda's economy and regional integration.
- Critically analyze policy decisions and their socio-economic implications.
- Demonstrate economic awareness in everyday life, public discourse, and responsible citizenship.

Economics and Developing Competences

Through participatory methodologies, Economics enables students to:

- Develop **knowledge, skills, attitudes, and values** relevant to Rwanda's socio-economic context.
- Prepare for **further study, employment, and civic engagement**.

- Align with **Vision 2050, NST1/NST2, and ESSP**, while building transferable soft skills (communication, teamwork, research, creativity, critical thinking, lifelong learning).
- Strengthen **interpretation, reading, writing, and public-speaking abilities**.
- Embrace **experiential learning, autonomy, adaptability, responsibility, and proactive problem-solving**.

2. PEDAGOGICAL APPROACHES

Student-Centered Methods

Learning is **active, participatory, and adaptive**, using varied strategies tailored to topics, student capabilities, and available resources. The precise mix of approaches depends on content and context, ensuring inclusivity and relevance.

2.1 Role of the Teacher

- Use **surveys, reports, and data** (UNDP, World Bank, NISR) to anchor discussions in Rwanda's economic realities.
- Facilitate **group work, debates, guest lectures, resource-based learning, and field studies**.
- Model inquiry, dialogue, and continuous reflection, equipping themselves with **student-centered techniques**.

2.2 Role of the Student

- Construct knowledge individually and collaboratively through **documentary research, discovery, debates, and group discussions**.
- Engage in activities that promote **collaboration, trust, critical thinking, and problem-solving**.

2.3 Special Needs Education & Inclusive Approach

All Rwandans have the right to access education regardless of their different needs. It follows from this that all citizens benefit from the same menu of educational programs, including those with special educational needs. The critical issue is that we have people/learners who are totally different in their ways of living and learning as opposed to the majority. The difference can be either emotional, physical, sensory, or intellectually learning challenged, **traditionally known as slow learners.**

These learners equally have the right to benefit from the free and compulsory basic education in public schools. Therefore, the schools' role is to integrate them and provide relevant education for them. The teacher, therefore, is requested to consider each learner's needs during the learning process. Assessment strategies and conditions should also be standardized to the needs of these learners. Detailed guidance for each category of learners with special education needs is provided in the guidance for teachers. Therefore, the teacher of economics should ensure the following:

- Guarantee access to education for all students, including those with special needs.
- Integrate diverse students with standardized assessments adapted to individual needs.
- Have inclusive practices and accommodations during teaching and learning.

3. ASSESSMENT APPROACH

Assessment is the process of evaluating the teaching and learning processes through collecting and interpreting evidence of an individual learner's progress in learning and to make a judgment about a learner's achievements measured against defined standards. Assessment is an integral part of the teaching-learning process. In the new competence-based curriculum, assessment must also be competence-based, whereby a learner is given a complex situation related to his/her everyday life and asked to try to overcome the situation by applying what he/she has learned. Assessment will be organized at the following levels: school-based assessment, district examinations, national assessment (LARS) and national examinations.

Precisely, assessment in the Economics curriculum is designed to **measure progress, mastery, and competence** using evidence aligned to defined standards. It integrates **formative (assessment for learning)** and **summative (assessment of learning)** approaches, ensuring that students demonstrate Competences through **real-life, contextualized tasks** rather than rote memorization.

3.1 Types of assessment

3.1.1 Formative and continuous assessment (assessment for learning)

Continuous assessment involves formal and informal methods used by schools to check whether learning is taking place. When a teacher is planning his/her lesson, he/she should establish criteria for performance and behavior changes at the beginning of a unit. Then at the end of every unit, the teacher should ensure that all the learners have mastered the stated key unit competences based on the criteria stated, before going to the next unit. The teacher will assess how well each learner masters both the subject and the generic competencies described in the syllabus and from this, the teacher will gain **a picture of the all-round progress of the learner**. The teacher will use one or a combination of the following: (a) observation (b) pen and paper (c) oral questioning.

3.1.2 Summative assessment (assessment of learning)

When assessment is used to record a judgment of competence or performance of the learner, it serves a summative purpose. Summative assessment gives a picture of a learner's competence or progress at any specific moment. The main purpose of summative assessment is to evaluate whether learning objectives have been achieved and to use the results for the ranking or grading of learners for deciding on progression, for selection to the next level of education, and for certification. This assessment should have an integrative aspect whereby a student must be able to show mastery of all competences.

Assessment **can be internal, school-based, or external in the form of national examinations. School-based and district-based summative assessments should take place once at the end of each term and once at the end of the year. School summative assessment average scores for each subject will be weighed and included**

in the final national examination grade. School-based assessment average grade will contribute to a certain percentage as teachers gain more experience and confidence in assessment techniques and in the third year of the implementation of the revised curriculum it will contribute 10% of the final grade but will be progressively increased. Districts will be supported to continue their initiative to organize a common test per class for all schools to evaluate the performance and the achievement level of learners in individual schools. External summative assessment will be done at the end of P6, S3 and S6.

The summative assessment is conducted to evaluate mastery, determine progression, ranking, and certification. Includes school-based internal assessments and external national examinations, ensuring comparability across districts and nationally (including LARS where applicable).

3.2 Record keeping

This is gathering facts and evidence from assessment instruments and using them to judge the student's performance by assigning an indicator against the set criteria or standards. Whatever assessment procedures are used shall generate data in the form of scores which will be carefully recorded and stored in a portfolio because they will contribute for remedial actions, for alternative instructional strategies, and for feed back to the learner and to the parents to check the learning progress and to advise accordingly, and also to the final assessment of the students.

This portfolio is a folder (or binder or even a digital collection) containing the student's work as well as the student's evaluation of the strengths and weaknesses of the work. Portfolios reflect not only work produced (such as papers and assignments) but are also a record of the activities undertaken over time as part of student learning. It will also serve as a verification tool for each learner that he/she attended the whole learning before he/she undergoes the summative assessment for the subject.

In summary, the following will be taken into consideration:

- **Purpose:** Collect assessment evidence to judge student performance against set criteria.
- **Portfolio:** A folder or digital collection of student work, tracking strengths, weaknesses, and participation. Serves as verification before summative assessment.
- **Timeframe:** Portfolios cover up to **three years of A-level work**, verifying attendance and engagement prior to summative judgments.

3.3 Item writing in summative assessment

Before developing a question paper, a plan or specification of what is to be tested or examined must be prepared to show the units or topics to be tested, the number of questions in each level of Bloom's taxonomy, and the mark allocation for each question. In a competence-based curriculum, questions from higher levels of Bloom's taxonomy should be given more weight than those from the knowledge and comprehension level.

Before developing a question paper, the writer must ensure that the test or examination questions are tailored towards competence-based assessment by doing the following:

- Identify topic areas to be tested from the subject syllabus.
- Outline subject matter content to be considered as the basis for the test.
- Identify learning outcomes to be measured by the test.
- Prepare a table of specifications.
- Ensure that the verbs used in the formulation of questions do not require memorization or recall answers only but test broad competences as stated in the syllabus.

The wider range of learning in the new curriculum means that it is necessary to think again about how to share learners' progress with parents. A single mark is not sufficient to convey the different expectations of learning which are in the learning objectives. The most helpful reporting is to share what students are doing well and where they need to improve in a given subject.

3.4 Examination Structure & Format

- **Paper Design:** One two-section paper at the course end.

Section A:

General: 6–10 questions covering broad principles, cross-topic integration, and current issues.

Section B:

Comprehension: 2 questions based on passages requiring comprehension, inference, evaluation, and synthesis.

- Candidates answer **two questions (one from each section)**.

3.5 Reporting to Parents

The wider range of learning in the new curriculum means that it is necessary to think again about how to share learner progress with parents. A single mark is not sufficient to convey the different expectations of learning, which are in the learning objectives. The most helpful reporting is to share what students are doing well and where they need to improve. A simple scale of Meeting expectations very well, meeting expectations and not meeting expectations, for each of the knowledge/understanding, subject skills and competences in a subject, will convey more than a single mark. For school-based assessments, these scores do not need to be countered.

- Reports reflect **multiple learning expectations**, not a single mark.
- Use a **competency scale** (e.g., *meets very well*, *meets*, *does not meet*) for knowledge, skills, and attitudes.
- School-based scores reported separately, not summed.

4. RESOURCES

4.1 Materials needed for implementation

To implement the **Economics** syllabus properly, appropriate and accurate reference materials need to be available and used. These include live or audiovisual testimonies and stories on socio economic and political issues, problematic social cases, pictures, videos, radio and television recorded or live transmissions. Schools must subscribe to different periodicals (journals and newspapers) on socio-economic and political issues. Other important resources include a range of documents such as books, reports and publications including brochures of financial institutions as well as documentary films on socio economic and political issues, speeches of famous personalities, different types of letters and CVs, charts and graphs showing economic growth, internet, audiovisual interactive online platforms, farming stations, all types of agro-processing factories and manufacturing, industrial areas and other sites that are interesting and can inspire learners.

Finally, schools should have their own libraries with access to the internet to facilitate the teaching and learning of **Economics**. School libraries should be well stocked with relevant reading materials and made easily accessible to students of different abilities and disabilities and include audio-visual materials, Braille and other special equipment for the visually impaired.

The teacher should allow sufficient time for discussion as this will enable him or her to guide students in the practical application of knowledge, skills and attitudes. The school will need to facilitate the teacher by providing extra resources, when necessary, assist by inviting guest speakers to illustrate lessons, and give permission to students for field trips.

4.2 Human resources

To teach the Economics syllabus very well, teachers need to be qualified to teach in advanced secondary level, to be open-minded, professional, and properly trained for delivering the national curriculum. The teacher should be up to date on current economic affairs and trends in Rwanda, in regional and in the world in general.

5. SYLLABUS UNITS

5.1 Presentation of the structure of the Economics syllabus units

Economics is taught in advanced level for stream two: Mathematics, Physics, Economics, and Geography (MPEG).

Economics is structured in Topic Areas. Topic Areas are themselves broken down into Sub-Topic Areas, while each of these is made up of Units. Units are characterized by the following features:

1. Each Unit shows the number of corresponding lessons in it.
2. Each Unit has a key unit competence that is based on the General and Religious Studies Subject overview, and which is accomplished through all teaching and learning activities undertaken by both the teacher and the learners. At the heart of a competence-based curriculum is the objective of ensuring learners reach a competence level in their learning across the whole curriculum. Hence, each unit is written in such a way that it develops a subject competence, referred to as the *key unit competence*.
3. Each Unit's key competence is broken down into the following three types of learning objectives:
 - a) **Type I:** Learning objectives related to Knowledge and Understanding (these objectives are also known as Lower Order Thinking Skills or LOTS) and are considered to be prerequisites to the following two types of learning objectives that are the ones targeted by the revised curriculum.

b) Type II and Type III: Learning objectives relating to Skills as well as Attitudes and Values. These learning objectives are also known as Higher Order Thinking Skills or HOTS and are the ones targeted in the revised curriculum.

4. Each Unit has a detailed content.
5. Each Unit is provided with learning activities that are expected to engage learners in an interactive learner centered participatory approach
6. Finally, each Unit shows its links to other subjects, its assessment criteria and the materials (or resources) that are needed during the teaching-and-learning process.

Items	Grades		
	S4	S5	S6

SENIOR FOUR

5.2 Economics Syllabus for senior four

5.2.1. Key competences at the end of senior four

A Senior 4 student should be able to:

- Analyze real-life situations using basic economic principles to make rational economic decisions at individual, community, and national levels.
- Apply demand and supply interactions to explain price determination, market equilibrium, and economic changes in everyday decisions.
- Apply demand and supply responsiveness to make informed everyday economic decisions
- Evaluate how the price mechanism allocates scarce resources through demand and supply to predict economic decisions in real-life markets.
- Analyze how rational consumers allocate limited income under budget constraints to maximize utility and reach equilibrium in consumption.
- Analyze how producers combine input and make efficient production decisions across different planning periods.
- Analyze how firms make production decisions under cost and revenue constraints to achieve growth and efficiency.

Topic area: GENERAL INTRODUCTION TO ECONOMICS			Sub-topic area: BASIC ECONOMIC CONCEPTS AND PRINCIPLES	
S4: Economics		Unit 1: Basic economic concepts and principles		No. of periods:25
Key Unit Competence: Analyze real-life situations using basic economic principles to make rational economic decisions at individual, community, and national levels.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define economics and explain its meaning, origin, and development – Explain the importance of economics to individuals, society, and national development. – Identify and explain basic economic terms, including needs, wants, resources,	– Apply basic economic concepts to analyze real-life situations at individual, community, and national levels. – Use economic terms correctly in oral and written explanations. – Analyze situations of scarcity and make rational choices by	– Appreciate the need for wise and responsible use of limited resources. – Demonstrate rational decision-making in managing personal and shared resources. – Show awareness of fairness and efficiency in economic activities and resource distribution. – Develop a positive attitude toward saving, budgeting, and planning.	Introduction – Meaning, origin and development of economics. – Importance of economics Basic and key terms used in economics: – Basic economic terms (needs, wants, resources, goods, services)	– Through brainstorming, students discuss everyday economic problems such as scarcity, rising prices, and choice, and link these situations to the meaning, origin, and purpose of economics, helping them understand how economics explains real-life decision-making.

goods, and services - Distinguish and correctly use key economic terms such as price, production, distribution, exchange, economic agents, externalities, ceteris paribus, and economic variables. - Describe the nature of economics as art, a science, and a social science. - Differentiate between positive and normative economics using relevant examples.	- identifying opportunity costs. - Construct, label, and interpret PPF diagrams to demonstrate efficient, inefficient, and unattainable production outcomes. - Analyze real or hypothetical economic problems using fundamental economic principles. - Compare different economic systems and assess their suitability for different societies.	- Recognize the role of economics in promoting sustainable development. - Respect diverse economic systems and viewpoints while engaging in discussions. - Develop responsibility and accountability in economic choices affecting individuals, communities, and the nation.	- Key terms used in economics (price, economic agents, production, distribution, exchange, externalities, ceteris paribus, economic variables), Nature of economics. - Economics as an art, a science and social science. - Positive and normative economics Scope and Branches of economics	- Through guided reading and note-making, students read short texts on the meaning, development, nature, scope, and branches of economics and summarize key ideas in their own words, building a strong understanding of how economic knowledge supports rational decisions. - Through concept identification activities, students identify and classify basic economic terms such as needs and wants, goods and services, wealth, welfare, and resources, using real-life examples from their homes and communities to understand how limited resources affect daily choices.
---	--	--	---	---

- Explain the scope of economics and identify its main branches, namely micro economics and macro economics. - Compare micro economics and macro economics by stating their meanings, examples, relationships, and differences	- Work collaboratively to discuss, explain, and solve simple economic problems. - Make a reasoned economic decision related to consumption, production, and resource allocation.		- Scope of economics - Branches of economics (Micro economics and Macro economics; meaning, examples, their relationship and difference) - Fundamental principles of economics - Meaning of fundamental principles of economics (Scarcity choice and opportunity cost)	
---	---	--	---	--

- Explain the fundamental principles of economics, including scarcity, choice, and opportunity cost, and show how they are related. - Describe the Production Possibilities Frontier (PPF), its meaning, assumptions, and importance. - Interpret points under, on, and beyond the PPF using diagrams and examples. - Construct and explain a hypothetical PPF schedule showing alternative production possibilities.			- Relationship among the fundamental principles of economics The Production Possibilities Frontier (PPF) - Meaning and assumptions of the PPF. - Ahypothetical example of a PPF schedule showing alternative production possibilities of given commodities - Illustration and interpretations of the PPF (points under, on and beyond the PPF)	- Through group discussion and presentation, students distinguish between positive and normative economic statements and present examples drawn from real situations, enabling them to analyze economic issues objectively and express informed judgments. - Through com Using illustrations, students draw simple Production Possibilities Frontier (PPF) diagrams, identify points on, inside, and outside the curve, and explain opportunity cost and efficiency, strengthening their ability to analyze trade-offs caused by scarcity.
--	--	--	--	---

- Explain shifts in the PPF and identify different types of PPFs. - Identify and explain basic economic questions and economic activities. - Describe different types of economic systems and analyze their advantages and disadvantages.			- Types of the PPF (concave/common, convex, constant/linear, biased and unbiased) Economic questions and economic Activities - Economic questions (meaning and examples) - Economic activities (meaning and examples of economic activities) Economic systems	- Using case studies and scenarios, students analyze changes in resources or technology to explain outward or inward shifts of the PPF, demonstrating how economic growth and constraints influence production decisions. - Through role-play and problem-solving, students act as households, firms, and government decision-makers
---	--	--	---	---

			– Meaning and types of economic systems. (traditional, planned, unplanned and mixed economic systems: their meaning, advantages and disadvantages)	– to explain and answer the basic economic questions of what, how, for whom, when, and where to produce, applying economic principles to real-life decision-making. – Through reflective practices, students identify economic activities in their local communities—production, distribution, exchange, and consumption—and report their findings, helping them relate economics to community development. – Through research activities, students explore different economic systems and explain how each system answers basic economic questions, enabling them to evaluate how societies organize resources and make choices.
--	--	--	--	---

				– Through debate, students explain the importance of studying economics and reflect on how economic knowledge helps individuals, communities, and governments make rational decisions that support wellbeing and national development.
Link to other subjects: <i>social sciences including geography location, history, political science, and sociology, business studies, accounting, and entrepreneurship, Mathematical and statistics</i>				
<i>Assessment criteria: Analyze real-life situations using basic economic principles to make rational economic decisions at individual, community, and national levels.</i>				
Teaching and learning materials: <i>Textbooks, newspapers, journals, internet access, visual and audio media, charts/graphs, and case study handouts.</i>				

Topic area: MICROECONOMICS			Sub-topic area 2.1: Price Theory	
S4: Economics		Unit 2: Demand and Supply Analysis.		No. of periods: 45
Key Unit Competence: Apply demand and supply interactions to explain price determination, market equilibrium and economic changes in everyday decisions.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define price and explain the different types of prices found in markets. – Explain the meaning of a market and identify different types of markets – Describe how prices are determined in the market through demand and supply.	– Apply demand and supply concepts to explain how prices are determined in real markets. – Construct and interpret demand and supply schedules and curves for individual markets and the market as a whole.	– Appreciate the role of demand and supply in determining fair market prices. – Demonstrate rational decision-making as consumers and producers based on price signals. – Develop awareness of market forces and how economic changes affect individuals and communities.	Introduction to price theory – Price (Meaning and types of prices) – Market (Meaning and types of market) – Price determination in the market. – Factors determining prices in the market Demand analysis: – Meaning and types of demand	– Using guided questioning and real-life examples, learners discuss the meaning of price and different types of prices observed in their local markets, such as retail prices, wholesale prices, and controlled prices, to understand how prices affect every day buying and selling decisions.

- Identify and explain the factors that determine prices in the market. - Define demand and distinguish between different types of demand. - State and explain the law of demand, including demand schedules and demand curves for individuals and the market. - Explain the slope of the demand curve and the factors that support its shape.	- Analyze changes in demand and supply and explain their effects on prices and quantities. - Use diagrams and simple equations to determine equilibrium price and quantity. - Explain real-life price changes (e.g., food prices, transport fares, data bundles) using demand and supply interactions.	- Show responsibility and fairness in market participation, such as buying, selling, and pricing decisions. - Value informed decision-making when responding to changes in prices, shortages, or surpluses. - Recognize the importance of market equilibrium in promoting economic stability and wellbeing.	- Law of demand, demand schedule and curve. - (stating the law of demand, the Demand schedule & Demand curve- individual and market schedule & curves) - Slope of the demand curve. (factors that support the slope of demand) - Abnormal demand curves (meaning and situations that lead to abnormal demand curves). - Factors determining demand in the market. - Change in demand and change in quantity demanded	- Through brainstorming and short video or picture prompts, learners explain the meaning of a market and identify different types of markets, including local markets, supermarkets, and online markets, linking them to how buyers and sellers interact in real life. - Using simple market scenarios, learners explain how prices are determined through the interaction of demand and supply, showing how shortages and surpluses influence price changes in common goods such as food, transport, and airtime.
---	--	---	---	---

- Describe abnormal demand curves and situations that cause them. - Explain the factors that determine demand in the market. - Distinguish between a change in demand and a change in quantity demanded. - Define supply and explain the different types of supply.	- Analyze everyday economic situations to make informed and rational consumer or producer decisions. - Interpret abnormal demand and supply situations and relate them to actual market behavior.		Supply analysis - Meaning and types of supply. - Law of supply, supply schedule and curve (stating the law of supply, the supply schedule and curve - individual and market schedule & curve), - Abnormal supply curves. - Factors that determine supply in the market. - Change in supply and change in quantity supplied. (meaning and illustrations)	- Through group discussion and case studies, learners identify and explain factors that determine prices in the market, such as changes in income, weather conditions, government policies, and production costs, and relate them to real market situations. - Through guided practice and diagram drawing, learners construct individual and market demand schedules and demand curves, correctly label them, and explain the downward slope using everyday examples. - Using real-life situations such as luxury goods or
--	--	--	---	---

- State and explain the law of supply, including individual and market supply schedules and curves. - Describe abnormal supply curves and their causes. - Explain the factors that determine supply in the market. - Distinguish between a change in supply and a change in quantity supplied.			Equilibrium determination. - Meaning of equilibrium, equilibrium price and quantity. - Determining market equilibrium using joint demand and supply schedule and curves. and equilibrium equations. - Effects of changes in demand and supply on equilibrium.	emergency goods, learners explain abnormal demand curves and the conditions under which they occur, applying economic reasoning to unusual consumer behavior. - Through problem-solving exercises, learners distinguish between a change in demand and a change in quantity demanded by analyzing shifts and movements along the demand curve. - Using local business examples, learners explain the meaning and types of supply and apply the law of supply to show how producers respond to changes in prices.
---	--	--	---	--

- Define equilibrium, equilibrium price, and equilibrium quantity. - Explain how market equilibrium is determined using joint demand and supply schedules, curves, and simple equations. - Explain the effects of changes in demand and supply on market equilibrium.				- Through guided drawing and interpretation, learners construct individual and market supply schedules and curves, explain their upward slope, and describe abnormal supply curves using real situations. - Using practice questions and illustrations, learners differentiate between a change in supply and a change in quantity supplied and explain the causes of each. - Through joint demand and supply tables and diagrams, learners determine equilibrium price and equilibrium quantity, showing how markets reach balance.
---	--	--	--	--

				- Using case studies of changing market conditions, learners analyze how changes in demand and supply affect equilibrium, and explain the resulting changes in price and quantity in everyday markets. - Through reflective discussion and short written tasks, learners explain how understanding demand and supply helps consumers, producers, and governments make rational economic decisions in daily life and during economic changes.
--	--	--	--	---

Link to other subjects:

- Mathematics: functions and equations, graphs to model relationships.
- Entrepreneurship: market research
- **Business** Studies: demand -supply analysis informs marketing, pricing, and product development.

Assessment criteria: Students can apply demand and supply interactions to explain price determination, market equilibrium, and economic changes in everyday decisions

Teaching and learning materials: Economics textbooks, intermarket data charts, worksheets for constructing and interpreting demand and supply schedules and curves., Newspapers, magazines, journals, internet access and audio media, Posters or infographics: Summarize key concepts for classroom display.

- ICT (Information and Communication Technology and AI: Artificial Intelligence) Support data and information collection, analysis, and presentation in economics (Using spreadsheets to plot PPF graphs or analyze economic data).

Topic area: MICROECONOMICS			Sub-topic area: Price Theory	
S4: Economics	Unit 3: Elasticity		No. of periods:25	
Key Unit Competence: Apply demand and supply responsiveness to make informed everyday economic decisions.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define elasticity and distinguish between its main types, namely elasticity of demand and elasticity of supply. – Describe elasticity of demand and identify its types, including price elasticity of demand, income	– Calculate elasticity values of demand and supply accurately using given data. – Interpret elasticity coefficients to explain consumer and producer	– Appreciate the importance of elasticity in understanding market behavior and price changes. – Demonstrate rational decision-making when responding to changes in prices and income. – Value informed consumer and producer choices based on demand and supply responsiveness.	Elasticity – Meaning and types of elasticity. Elasticity of demand: – Meaning and types of elasticity of demand – Price Elasticity of demand (PED) (meaning, calculations, categories, Methods of	– Using guided classroom discussion and everyday examples, learners explain the meaning of elasticity and identify its main types, relating responsiveness to common situations such as changes in prices of food, transport fares, or phone data.

elasticity of demand, and cross elasticity of demand. - Describe price elasticity of demand (PED) in terms of its meaning, formula, categories, determinants, and uses. - Describe income elasticity of demand (YED) and cross elasticity of demand (CED) with reference to their meanings, formulas, and interpretation of results.	responsiveness to changes in price and income. - Apply price elasticity of demand to explain real-life situations such as price increases, discounts, and taxation. - Use income and cross elasticity concepts to analyze changes in consumption patterns and relationships between goods. - Analyze supply responsiveness to price changes using elasticity of supply concepts.	- Develop awareness of market sensitivity to economic changes and shocks. - Show responsibility and fairness in pricing, consumption, and production decisions. - Recognize the role of elasticity analysis in supporting efficient resource allocation and economic stability.	computing PED, determinants, practical application) - Income elasticity of demand (YED) (meaning, interpretation and calculating YED) - Cross elasticity of demand (CED) (meaning, interpretation calculating CED) Elasticity of supply - Meaning and Types of elasticity of supply	- Through brainstorming and real-life questioning, learners explain the meaning of elasticity of demand and identify its different types, linking them to how consumers respond differently to price, income, and related goods. - Using numerical examples and simple calculation exercises, learners calculate price elasticity of demand (PED), classify it into elastic, inelastic, unitary, perfectly elastic, and perfectly inelastic demand, and explain what each category means for consumer behavior.
--	--	---	---	--

- Identify the determinants of elasticity of demand. - Define elasticity of supply and outline the factors that influence elasticity of supply. - Identify and describe the categories of price elasticity of supply.	- Make informed everyday economic decisions as consumers or producers based on elasticity information. - Explain market reactions to price and income changes using elasticity concepts.		- Price Elasticity of Supply (PES) (meaning and - calculating price elasticity of supply. - Categories of price elasticity of supply - Determinants of price elasticity of supply. - Importance of price elasticity of supply	- Through case studies drawn from local markets, learners analyze the determinants of price elasticity of demand and explain why some goods, such as basic necessities, are more price-inelastic than others, supporting informed consumption decisions. - Using practical scenarios such as salary changes or price discounts, learners calculate and interpret income elasticity of demand (YED) to explain how changes in income affect demand for normal, inferior, and luxury goods. - Through guided problem-solving activities, learners calculate and interpret cross elasticity of demand (CED) to identify substitutes, complements, and unrelated goods, and explain how this knowledge helps consumers and producers make better choices.
---	---	--	---	---

				– Using discussion and illustration, learners explain the meaning of elasticity of supply and calculate price elasticity of supply to show how producers respond to price changes in the short run and long run.
Link to other subjects: – Mathematics: functions and equations. – Entrepreneurship: market study				
Assessment criteria: Students can apply demand and supply responsiveness to make informed, everyday economic decisions.				
Teaching and learning materials: Newspapers, magazines, textbooks, journals, internet access, audio media, charts and posters. Technology (ICT) and Artificial Intelligence (AI).				

Topic area: MICROECONOMICS			Sub-topic area: Price Theory	
S4: Economics		Unit 4: Price mechanism		No. of periods: 20
Key Unit Competence: Evaluate how market forces guide resource allocation and economic decisions in real-life markets.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the meaning of the price mechanism and state its key assumptions. – Describe how the price mechanism operates in a free market.	– Analyze how market forces of demand and supply determine prices and guide the allocation of resources. – Evaluate real-life market situations to explain how the price mechanism influences production and consumption decisions.	– Appreciate the role of market forces in guiding efficient use of scarce resources. – Demonstrate a balanced attitude toward free markets and government intervention. – Value price stability as a factor that supports economic welfare and planning.	Introduction to Price mechanism – Meaning and assumptions of price mechanism – Operation and role of price mechanism in resource allocation. – Advantages and disadvantages of price mechanism – Government intervention in Price mechanism (methods used)	– Using guided discussion and real-life market examples, learners explain the meaning of the price mechanism and its assumptions by analyzing how prices of common goods change when demand or supply changes, helping them understand how markets coordinate economic decisions.

- Explain the role of the price mechanism in allocating resources efficiently through demand, supply, and price. - Identify reasons why governments interfere in the price mechanism. - Describe methods of government intervention in prices, including subsidies, taxes, price controls, and regulation.	- Analyze the impact of government intervention on prices, market efficiency, and resource allocation. - Interpret causes and effects of price fluctuations, especially in agricultural markets. - Assess the effectiveness of price control measures in achieving economic and social objectives.	- Develop concern for vulnerable groups, such as small farmers and low-income consumers, affected by price fluctuations. - Show responsibility and fairness in evaluating economic policies like price controls. - Recognize the importance of informed economic decision-making in promoting sustainable development.	Price fluctuations - Meaning and causes of agriculture products price fluctuations - Effects and Measures to control agricultural products price fluctuations. (including buffer stock, stabilization fund and international commodity agreement)	- Through brainstorming and teacher-led explanation, learners describe how the price mechanism operates in a free market and explain its role in allocating resources by guiding producers on what to produce and consumers on what to buy.
--	--	--	--	---

- Define price fluctuations, particularly for agricultural products. - Explain the causes of agricultural price fluctuations, such as weather changes, supply conditions, and demand variations. - Describe the effects of agricultural price fluctuations on farmers, consumers, and the economy.	- Make informed economic judgments about when markets should be left free and when government intervention is necessary. - Apply economic reasoning to explain real-life market outcomes such as shortages, surpluses, and price instability.		Price controls - Meaning and forms of price controls. (Minimum, maximum price legislations- their meaning, curves, objectives and consequences) - Effects of price controls.	- Using case studies from local markets, learners analyze how prices act as signals and incentives in resource allocation, evaluating how market forces influence production, consumption, and distribution decisions in real-life situations. - Through group discussion and examples, learners identify reasons why governments intervene in the price mechanism and explain how methods such as subsidies, taxes, and regulations affect market outcomes and economic decisions.-
--	--	--	---	---

- Explain measures used to control price fluctuations, including buffer stocks, stabilization funds, and international commodity agreements. - Define price controls and identify different forms such as minimum prices, maximum prices. - Explain the positive and negative effects of price controls on markets and resource allocation.				- Using real agricultural market scenarios, learners explain the meaning and causes of price fluctuations of agricultural products, linking weather patterns, supply changes, and demand variations to price instability. - prices, relating them to real-life government policies. - Through debate and comparative analysis, learners evaluate the positive and negative effects of price controls, explaining how such policies can
---	--	--	--	--

				– lead to shortages, surpluses, or improved welfare, and judging their impact on efficient resource allocation. – Through reflective discussion and short written tasks, learners explain how understanding the price mechanism, price fluctuations, and price controls helps individuals, producers, and governments make informed economic decisions in real-life markets.
Link to other subjects: – Mathematics: functions and equations. – Entrepreneurship: market study				
Assessment criteria: Students can evaluate how market forces guide resource allocation and economic decisions in real-life markets.				
Teaching and learning materials: Newspapers, magazines, textbooks, journals, internet access audio and visual media.				
Technology (ICT) and Artificial Intelligence (AI)				

Topic area: MICROECONOMICS			Sub-topic area: CONSUMER BEHAVIOUR.	
S4: Economics		Unit 5: Consumer behavior		No. of periods: Periods: 30
Key Unit Competence: Analyse how rational consumers allocate limited income under budget constraints to maximize utility and reach equilibrium in consumption.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define consumer and consumer behaviour, – state the basic assumptions about consumer choices – Explain the relationship between total utility and marginal utility using numerical examples and curves.	– Analyze consumer behavior using utility, budget constraints, and indifference curve analysis. – Calculate and interpret total and marginal utility from given data.	– Appreciate the importance of rational decision-making in consumption under limited income. – Demonstrate responsible use of limited resources through informed consumer choices. – Value budgeting and planning as tools for maximizing satisfaction.	Introduction to consumer behaviour – Consumer behaviour and its assumptions (Meaning of consumer, consumer behaviour, and assumptions) The concept of Utility – Meaning of utility, Total Utility (TU) and Marginal Utility (MU)	– Using guided discussion and real-life examples, learners explain who a consumer is and what consumer behaviour means by discussing how people choose what to buy with limited income. – Through brainstorming and teacher explanation, learners identify and explain the basic assumptions of rational consumer behavior, such as limited income and the desire to maximize satisfaction.

- State and explain the law of diminishing marginal utility, including its assumptions and limitations. - Define the budget constraint and explain the concept of a budget constraint. - Explain the effects of changes in income and prices on the budget line. - Define an indifference curve and explain its assumptions and properties.	- Apply the law of diminishing marginal utility to explain consumer decision-making. - Draw and interpret budget lines, showing the effects of income and price changes. - Draw and interpret indifference curves and indifference maps. - Analyze marginal rate of substitution (MRS) and explain its diminishing nature.	- Develop awareness of opportunity cost in consumption decisions. - Show fairness and efficiency awareness when interpreting consumer and producer surplus. - Recognize the relevance of consumer behaviour analysis in improving personal wellbeing and market efficiency.	- Relationship between Total Utility and Marginal Utility (MU) (using calculations and curves) - The law of diminishing marginal utility (the law, assumptions, limitations and relationship between MU and demand curves)	- Using numerical examples and classroom explanations, learners define utility, total utility, and marginal utility, and describe how satisfaction changes as consumption increases. - Through worked examples and curve illustrations, learners explain the relationship between total utility and marginal utility using simple calculations and graphs. - Using questioning and short scenarios, learners state and explain the law of diminishing marginal utility, including its assumptions and limitations, by relating it to everyday consumption like eating food or using airtime.
--	---	---	---	--

	- Determine consumer equilibrium graphically using indifference curves and budget lines. - Analyze income and substitution effects to explain changes in consumption patterns following price changes. - Calculate and interpret consumer and producer surplus using numerical and graphical methods. - Apply consumer behaviour analysis to real-life situations, such as budgeting and consumption choices.			- Through guided explanation and examples, learners define the budget line and budget constraint and explain how income and prices limit consumer choices. - Using diagrams and examples, learners explain how changes in income and prices affect the position of the budget line.
--	--	--	--	--

- Explain the concept of an indifference map. - Define the marginal rate of substitution (MRS) and explain its relationship with indifference curves. - Explain the conditions for consumer equilibrium using the budget line and indifference curve. - Explain how consumers maximize utility when allocating limited income.			- The Budget constraint - The budget constraint and budget line (Meaning of budget constraint, budget line and assumptions) - Effects of income and price changes on the budget line - Indifference Curve - Meaning and assumptions - Properties of indifference curves. - Indifference map - Marginal Rate of Substitution (MRS)	
---	--	--	--	--

- Define and explain the income effect and substitution effect of a price change. - Explain how price changes affect consumer choice. - Define consumer surplus and producer surplus and explain how they are measured and interpreted in real markets.			- Meaning and interpretation - Relationship between MRS and indifference curves Consumer Equilibrium - Meaning, Conditions for equilibrium (First order and second order conditions) Real Income and Substitution - Meaning of real income and substitution effects - Impact of price changes on consumer choice	
---	--	--	--	--

			Consumer and Producer Surplus – Meaning, measurement illustration, and interpretation of consumer surplus. – Meaning, measurement illustration and interpretation of producer surplus	
Link to other subjects: – Mathematics: functions and equations. – Entrepreneurship: market study				
Assessment criteria: Students can analyse how rational consumers allocate limited income under budget constraints to maximize utility and reach equilibrium in consumption.				
Teaching and learning materials: Newspapers, magazines, textbooks, journals, internet access and audio media.				

Topic area: MICROECONOMICS			Sub-topic area: PRODUCTION	
S4: Economics		Unit 6: Production Theory		No. of periods: 38
Key Unit Competence: Analyze how producers combine inputs and make efficient production decisions across different planning periods.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the meaning, purpose, types, and levels of production. – Describe the factors of production (land, labour, capital, and entrepreneurship) and explain their roles in the production process.	– Classify production into levels and types in real-life situations. – Construct and interpret production schedules showing TP, AP, and MP. – Draw and analyze production curves (TP, AP, and MP) and explain their shapes.	– Appreciate the importance of efficient use of scarce resources. – Demonstrate positive attitudes toward planning and decision-making in production. – Recognize the role of entrepreneurship and innovation in economic development.	Introduction to the theory of production – Meaning and purpose of production. Types and Levels of Production – Types of production (subsistence/ direct, commercial/ indirect, etc.)	– Through guided discussion, questioning, and simple case studies, learners identify and classify production activities in their community, distinguish types and levels of production, and explain the purpose of production for households and firms, enabling them to understand basic production concepts in real-life contexts.

– Explain the concept of a production function and distinguish between short-run and long-run planning periods. – Define and differentiate between Total Product (TP), Average Product (AP), and Marginal Product (MP). – Explain the production function schedule and curves in the short run. – State and explain the law of diminishing returns (law of variable proportions) and its assumptions.	– Apply the law of diminishing returns to real or simulated production scenarios. – Analyze production decisions under short-run constraints where some factors are fixed. – Compare production outcomes under different returns to scale in the long run. – Draw and interpret isoquant maps and isocost lines.	– Exhibit willingness to analyze production activities critically and objectively. – Show awareness of the need for sustainable and responsible production practices – Demonstrate interest in applying economic principles to real-life business and production situations. – Respect productive factors, especially human labour and environmental resources.	– Levels of production (primary, secondary, tertiary) Factors of Production – Land, (meaning, characteristics, determinants of rent and its role) – Labour, (meaning, categories, characteristics, Specialisation and division of labour) – Capital (Meaning, categories, interest as a reward for capital, role Capital in production, Capital accumulation)	– Through group work, role-play, and problem-based activities, learners recognize land, labour, capital, and entrepreneurship in familiar businesses, understand their roles, and examine challenges to entrepreneurship, helping them appreciate how factors of production contribute to output. – Through guided explanation, analysis of tables and graphs, and think-pair-share activities, learners define the production function, distinguish between short-run and
--	---	--	---	---

- Explain the concept of returns to scale and distinguish between increasing, constant, and decreasing returns to scale. - State and explain the law of returns to scale and its assumptions. - Explain the meaning of isoquants and isocosts and their relevance to production decisions. - Describe how producers make efficient production choices in the short run and the long run.	- Analyze how changes in factor combinations affect output and production efficiency. - Use diagrams, tables, and equations to evaluate efficient input combinations. - Differentiate producer decisions across short-run and long-run planning periods. - Solve basic economic problems related to input use, productivity, and efficiency.		- Entrepreneurship (meaning, characteristics, functions and limitations to entrepreneurship development) Production Function - Production Function and Planning Periods. (Meaning and forms of expressing of production function: table, equation, graph; Planning Periods: short run and long run.) Product of the firm - Meaning, calculations and curves (Total Product (TP),	long-run planning periods, and explain their importance in production decision-making. - Through numerical examples, practical exercises, and guided questioning, learners calculate and interpret total, average, and marginal product, and relate changes in productivity to real-life production situations. - Through constructing production schedules, drawing graphs, simulations, and guided discovery, learners analyze short-run production behavior and derive the law of diminishing returns when one factor is fixed.
---	---	--	--	--

			Average Product (AP), Marginal Product (MP) Production function in the short run. – Production function schedule and curves in the short run – Stages of production in SR – The law of diminishing returns/the law of variable proportions (assumptions, illustration, importance and limitations) Production function in the long run (Returns to Scale)	– Through data analysis, group discussion, and real-life examples, learners identify stages of production, explain the causes of diminishing returns, and apply the law to practical production activities. – Through case studies, comparisons, and guided questioning, learners analyze different types of returns to scale and distinguish long-run production decisions from short-run decisions.
--	--	--	--	--

			- Meaning and types of returns to scale (increasing, constant, decreasing) - Law of returns to scale and its assumptions Isoquants and Isocosts - Meaning, schedule, graphical representation and properties of isoquants - Meaning, schedule, graphical representation and properties of Isocosts - Producer equilibrium (using isoquant and isocost.	- Through discussion, diagram interpretation, and problem-solving, learners explain how changes in scale affect output and assess firms' decisions to expand production in the long run. - Through guided drawing, pair work, application, and reflection, learners construct and interpret isoquants and isocost lines, analyze efficient input combinations, and evaluate cost-minimizing and output-maximizing production choices.
--	--	--	---	--

Link to other subjects:

- Mathematics: **The Theory of Production uses formulas, graphs, and calculations to analyze relationships between inputs and output**, business decision-making
- Accounting & Entrepreneurship: **Sustainable economic development**
- Social Studies & ICT: **Students see how production decisions shape both business success and national progress.**

Assessment criteria: Students can analyze how producers combine inputs and make efficient production decisions across different planning periods.

Teaching and learning materials: Graph paper, calculators, projector, online lessons with computers, data portals, podcasts, charts, Factory visits. Newspapers, magazines, textbooks, journals, internet access and audio media.

Technology (ICT) and Artificial Intelligence (AI:)

Topic area: MICROECONOMICS		Sub-topic area: PRODUCTION		
S4: Economics		Unit 7: FIRM BEHAVIOUR		No. of periods: 48
Key Unit Competence: Analyze how firms make production decisions by balancing costs, revenue, and profits to achieve growth and efficiency.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define a firm, plant, and industry, and explain the main objectives of a firm. – Explain the long-term decisions of a firm and identify factors influencing such decisions. – Explain the meaning of firm location and analyze the factors influencing the location of firms and industries.	– Analyze firm behavior by examining how costs, revenues, and profits influence production decisions. – Calculate and interpret short-run costs (TFC, TVC, TC, AFC, AVC, ATC, and MC) from given data. – Draw and interpret cost curves and explain their relationships.	– Appreciate the importance of efficiency and cost control in business decision making. – Develop a positive attitude toward entrepreneurship and firm growth. – Value careful planning and informed decision making in production and investment choices.	Introduction to the firm behaviour – Meaning of a firm, plant and industry and objectives of the firm. – Long term decisions of a firm and influencing factors. Location of firms – Meaning and factors influencing location of a firm and an industry Localization of firms – Meaning and causes, – Merits and demerits of localization of firms	– Using guided discussion and local business examples, learners identify the meaning of a firm, plant, and industry, and explain the objectives of firms by examining why businesses aim at profit, growth, survival, and efficiency. – Through brainstorming and case analysis, learners identify and explain long-term decisions

- Describe localization of firms, including its meaning, causes, merits, and demerits. - Explain how small-scale firms survive alongside large-scale firms. - Define cost of production and distinguish between short-run and long-run costs. - Explain the variation of costs in the short run, including AFC, AVC, ATC (AC), and MC, and describe their shapes.	- Analyze long-run production decisions, including scale of production and growth of firms. - Evaluate the impact of firm location and localization on efficiency and costs. - Assess mergers and economies of scale in terms of efficiency, growth, and	- Demonstrate fairness and responsibility when evaluating firm behavior, mergers, and market competition. - Recognize the role of profits in encouraging innovation, production, and economic development. - Show awareness of the social and economic impacts of firm growth and market power.	- Survival of small-scale firms alongside large scale firms. Costs of the firm - Meaning and types of cost Short run costs of the firm - Total fixed cost (TFC), Total variable costs (TVC), Total costs (TC), (meaning and curves - Calculating and illustrating TFC, TVC, TC - Variation of costs in the short run - (calculating and illustrating AFC, AVC, ATC/AC, MC) - Relationship between short run costs curves ((using unit cost schedule and curves of AFC, AVC, ATC/AC, MC)).	of a firm, such as expansion, investment, and technology adoption, and discuss the factors influencing these decisions, including market size, costs, and competition. - Using map work and real-life examples, learners explain the meaning of location of firms and industries and analyze factors influencing location decisions, such as transport, labour availability, raw materials, and market access. - Through group discussion and presentation, learners explain the meaning and causes
--	--	---	---	---

- Explain the relationships among short-run cost curves using calculations and diagrams. - Explain how the long-run average cost (LAC) curve is derived. - Define scale of production and explain the growth of firms. - Explain the meaning and types of mergers, and discuss their reasons, advantages, disadvantages, and limiting factors.	- competitiveness. - Calculate revenues (TR, AR, MR) and analyze their relationships under different market conditions. - Determine profit maximizing output levels under perfect competition using cost and revenue analysis. - Apply cost, revenue, and profit analysis to real-life firm decisions, such as expansion, pricing, and production planning.		The long-run cost curve of a firm - Deriving the Long-run AC curve Scale of production - Meaning of scale of production and growth of firms. Mergers - Meaning and types of mergers - Reasons, advantages and disadvantages of merging of firms - Factors limiting Mergers. Economies and diseconomies of scale - Economies of scale (Meaning illustration, categories (Internal and external economies of scale))	of localization of firms, and analyze its merits and demerits, linking them to cost reduction, efficiency, and competition. - Using case studies of small and large businesses, learners analyze how small-scale firms survive alongside large-scale firms by focusing on specialization, flexibility, niche markets, and personalized services. - Through guided explanation and numerical illustrations,
---	--	--	--	--

- Define and explain economies of scale (internal and external) and diseconomies of scale (internal and external). - Define revenue and explain different forms of revenue. - Explain how to calculate total revenue (TR), average revenue (AR), and marginal revenue (MR) and describe their relationships.			- Diseconomies of scale (Meaning and categories (Internal and external economies of scale)) Revenues and profits of a firm - Meaning, and forms of revenues. - Calculating revenues of a firm (TR, AR and MR) - Relationship between TR, AR and MR - The revenue positions of a perfect and imperfect competitive firms. Profits of a firm - Meaning and forms of profit - Profit maximization under perfect competition	learners define costs of production and explain short-run costs, including total fixed cost (TFC), total variable cost (TVC), and total cost (TC), relating them to real production situations. - Using calculation exercises and curve drawing, learners calculate TFC, TVC, and TC from given data and draw their curves to show how costs vary with output in the short run. - Through diagram drawing and interpretation, learners explain variation of costs in the short run by analyzing average
--	--	--	--	---

- Explain revenue positions under perfect and imperfect competition. - Define profit, identify its forms, and explain the role of profit in production. - Explain profit maximization under perfect competition and identify the determinants of profits.			- Profit maximization under imperfect competition - Determinants of profits - The role of profits in production.	fixed cost (AFC), average variable cost (AVC), average total cost (ATC), and marginal cost (MC) curves. - Using guided problem-solving activities, learners analyze the relationships among short-run cost curves through calculations and diagrams, explaining why MC intersects AVC and ATC at their minimum points. - Through explanation and graphical illustration, learners explain the long-run average cost (LAC) curve and demonstrate how it is derived from short-run
---	--	--	--	--

				average cost curves, relating it to long-term planning decisions. – Using discussion and examples, learners explain the meaning of scale of production and analyze how firms grow by expanding output to reduce costs and improve efficiency. – Through structured reading and group discussion, learners explain the meaning and types of mergers and analyze the reasons, advantages, disadvantages, and factors limiting mergers, evaluating their impact on firm growth and efficiency.
--	--	--	--	---

				- Using real-life production examples, learners explain economies and diseconomies of scale, distinguishing between internal and external economies and diseconomies, and assessing their effect on firm costs and efficiency. - Through guided explanation and numerical exercises, learners define revenue and calculate total revenue (TR), average revenue (AR), and marginal revenue (MR), explaining their relationships using tables and graphs.
--	--	--	--	--

				– Using comparative diagrams and discussion, learners analyze revenue positions under perfect and imperfect competition, explaining how market structures influence revenue behavior. – Through problem-solving and graphical analysis, learners explain profit and its forms, determine profit-maximizing output under perfect competition using $MR = MC$, and discuss the role and determinants of profits in guiding production decisions.
--	--	--	--	--

				– Through reflective discussion and short written tasks, learners explain how firms balance costs, revenue, and profits to make efficient production decisions that promote growth, competitiveness, and long-term sustainability
Link to other subjects: – Mathematics: functions and equations. – Entrepreneurship: market study – Geography: industrialization(Firms)				
Assessment criteria: Students can analyze how firms make production decisions by balancing costs, revenue, and profits to achieve growth and efficiency.

SENIOR FIVE

5.3 Economics Syllabus for senior Five

Key competences at the end of senior five:

Senior 5 Economics – Student's Profile

By the end of Senior 5, a student should be able to:

- Evaluate the operation and performance of firms under different market structures, and assess their effects on price determination, efficiency, output, and consumer welfare in real-life contexts.
- Analyse national income concepts, measurement methods, and indicators, and evaluate their importance and limitations in economic planning and development.
- Analyse the relationships among consumption, saving, and investment, and apply the multiplier principle to explain their implications on the national economy.
- Evaluate the functions, characteristics, and value of money, and assess its role in facilitating exchange and maintaining economic stability.
- Analyse the role of financial institutions in mobilizing savings, creating credit, promoting financial inclusion, and supporting economic development.
- Evaluate the causes, types, and effects of inflation, and assess its impact on purchasing power, income distribution, savings, and investment.
- Analyse unemployment and its implication on economic development.
- Evaluate the role and implications of public budget and public debt in economic development of the country.
- Evaluate different types and principles of taxation, and assess their impact on equity, efficiency, government revenue, and economic behaviour.
- Analyse population size, structure, and growth, and evaluate their implications for economic development, resource utilization, and employment.
- Analyse labour and wage determination and their implications on the labour market, including their effects on employment, income distribution, and market efficiency.

Topic area: MICROECONOMICS			Sub-topic area: PRODUCTION THEORY	
S5: Economics	Unit 1: Market structures		No. of periods: 34	
Key Unit Competence: Analyse the operation and performance of firms under different market structures and their effects on price determination, efficiency, output, and consumer welfare in real-life contexts.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the meaning of structure of its features and the importance. – Describe the key characteristics of different market structures (perfect competition, monopoly, monopolistic competition, and oligopoly).	– Analyse how firms behave under different market structures in both short-run and long-run situations. – Illustrate profit maximization using diagrams and economic models.	– Appreciate the importance of competition in improving efficiency and consumer welfare. – Develop a positive attitude towards ethical and fair business practices.	Meaning and features of market structures. Categories of market structures Perfect competition market. – Meaning and characteristics of perfect competition. – Cost curves for a firm under perfect competition. – Relationship between average revenue (AR) and marginal revenue (MR), price and demand of a firm under perfect competition. – Short-run and long run equilibrium position of a firm under perfect competition	Students work in small groups to research: – The meaning and features of market structures. – Identify the categories of market structure. their features, advantages, and disadvantages, and present findings to the class.

– Explain how firms determine output and prices in the short run and long run. – Describe the process of profit maximization in different market conditions. – Explain why firms may continue operating even when making losses (shutdown and breakeven concepts).	– Interpret breakeven and shutdown points under perfect competition. – Analyse strategies used by oligopolistic firms to compete without engaging in price wars. – Illustrate and interpret the kinked demand curve in oligopoly. – Evaluate the role of government policies in regulating markets and promoting fair competition.	– Show curiosity and initiative in analyzing real-world market situations. – Value innovation, transparency, and fairness in firms activities. – Develop critical thinking towards monopolistic practices and market failures. – Value ethical business behavior and transparency in markets.	– Price and output determination of a firm under perfect competition in the short-run (Equilibrium of the firm in short-run) – Abnormal profits and loss making firm in the short-run under perfect competition. – Break-even and Shut down points of a firm under perfect competition. Why Firms Continue Operating Despite Losses – Advantages and disadvantages of perfect competition Monopoly – Meaning, forms and features of monopoly – The bases/sources/origin of monopoly (Factors which give rise to monopoly) – Equilibrium position of a firm and profit maximization of a firm under monopoly market in the short-run	– Groups illustrate short-run and long-run profit maximization under different market structures using graphs. – Students compare the characteristics of market structures through guided group discussions. – Using a Rwanda-based case study, students analyze and compare how firms operate in different market structures.
---	---	--	---	--

- Explain the conditions necessary for successful price discrimination under monopoly. - Identify and explain different forms of product differentiation. - Describe how prices are determined in oligopolistic markets. - Explain barriers to entry and their effects on competition and market efficiency.	- Analyse how different barriers to entry influence market dynamics. - d assess the efficiency and performance of different market structures.		- Measures of controlling monopoly - Advantages and disadvantages of monopoly - Price discrimination under monopoly Monopolistic competition - Meaning and characteristics of firms under monopolistic competition. - Equilibrium position of a firm under monopolistic competition. - Price and output determining of a firm under monopolistic competition in the short-run - Abnormal profit and loss under monopolistic competition firm - Equilibrium of the firm under monopolistic competition in the long-run - Product differentiation under monopolistic competition Oligopoly	- Through role play, students simulate firms facing entry barriers (licenses, capital, regulations) to understand challenges. - Groups create a comparison table of perfect competition, monopoly, oligopoly, and monopolistic competition, highlighting key features such as number of firms, entry barriers, and pricing. - Using small group,
---	---	--	---	--

			– Meaning, features and forms of oligopoly – Demand curve of a firm under oligopoly – Price determination under oligopoly (Methods of Price Determination) – Non price competition under oligopoly – Comparison of the different market structures	
--	--	--	--	--

Link to other subjects:

- Mathematics: Use of graphs and equations to explain cost, revenue, and profit relationships.
- Business Studies: Application of market theory to real-world business competition and decision-making.
- Entrepreneurship: Exploration of how firms are started and operate within different market structures.
- Accounting: Provision of cost and profit data to support economic and managerial decisions.

Analysis of digital markets and online competition in the modern economy.

Assessment criteria:

Students can analyze and compare how firms operate under different market structures, including price and output determination, profit maximization, and efficiency, and apply these concepts to real-world examples using diagrams and economic reasoning.

Teaching and learning materials: Teaching and learning materials include textbooks and journals, newspapers and magazines, internet access and digital resources, audio and visual media such as radio, videos, and podcasts, as well as graphs, charts, diagrams, whiteboards, flip charts, projectors or smart boards, and case studies with Rwanda-based examples

Topic area: MACROECONOMICS			Sub-topic area: MONEY AND FINANCIAL INSTITUTIONS	
Topic area: Macroeconomics			Sub-topic area: NATIONAL INCOME	
S5 Economics	Unit 2: National income			No. of periods: 22
Key Unit Competence: Assess national income concepts, measurement methods, and indicators, including their importance and limitations economic planning and development.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain GDP, GNP, NNP, per capita income, and assess their relevance for Rwanda’s development. – Evaluate different measurement approaches (income, expenditure, output) and their suitability in policy contexts. – Analyze determinants of national income (resources,	– Use national income ideas to explain real examples in Rwanda (like Vision 2050 or farming/coffee sector). – Work out simple numbers for GDP, per capita income, and inequality using Rwanda data (BNR, NISR).	– Appreciate the role of national income in guiding development planning and policy. – Value equitable income distribution and fairness in economic systems.	– Meaning of national income and related concepts. – Methods/Approaches of measuring national Income – Importance and difficulties of measuring national income in developing countries. Circular flow of income – Circular flow of income in a closed economy	– Group research and presentations on concepts and measurement methods. – Draw and interpret circular flow and AD–AS diagrams. – Case studies comparing Rwanda with other countries using per capita income.

technology, investment, human capital) and their impact on growth. – Assess the importance and limitations of national income statistics for planning, focusing on data quality and comparability. – Interpret equilibrium national income using AD–AS, inflationary/ deflationary gaps, and leakages/ injections. – Examine phases of the business cycle and their implications for Rwanda's stability and growth.	– Draw and read basic graphs such as AD–AS, circular flow of income, and Lorenz curves. – Look at changes in national income and suggest simple ways the government can keep the economy stable. – Compare how people live in Rwanda and other countries using per capita income or PPP.	– Show awareness of economic changes and their impacts on livelihoods. – Recognize the government's role in stability, redistribution, and welfare improvement. – Balance equity vs. growth trade-offs with a focus on inclusive development. – Develop integrity in handling and interpreting economic data.	– Circular flow of income in an open economy – Determinants of national income. – Limitations of using National Income Figures – Limitations of using per capita income figures as a measure of a good standard of living in a country for a period of time. – Limitations of using the figures of per capita income to compare the standard of living between countries. Equilibrium level of national income. – Inflationary gap and deflationary gap approach – Leakages and injections approach	– Analyze a local sector (e.g., agriculture/ coffee) to explain business cycles. – Class discussion on causes and solutions to income inequality.- In small groups, students brainstorm the cause and effects of income inequality in Rwanda and suggest possible solutions .
--	--	--	--	--

– Evaluate income inequality using Lorenz curves and Gini coefficients, linking findings to social policy. – Investigate causes of low per capita income in Rwanda and connect them to development challenges.	– Write short reports that show how national income affects Rwanda's development goals. – Take part in class debates and role-plays about "growth vs. equality," using facts to support your ideas.	– Cultivate proactive problem-solving attitudes toward Rwanda's low income challenges.	– Fluctuations in National Income (Business Cycle) – National Income & Standard of Living – Income Distribution & Inequality (Lorenz Curve, Gini Coefficient) – Causes of Low Per Capita Income (with reference to Rwanda)	
---	--	--	---	--

Link to other subjects:

- **Mathematics:** Graphs, equations, Lorenz curve, Gini coefficient.
- **Accounting:** National accounts, income–expenditure methods.
- **Business Studies:** Business cycles and market impacts.
- **ICT / Computer Studies:** Data processing, visualization, and statistical analysis.

Assessment criteria: Students can analyze the importance of measuring national income, apply measurement approaches, interpret data, and evaluate the impact of income inequality on Rwanda's development.

Teaching and learning materials: Textbooks, journals, newspapers, magazines, internet access, audio-visual media, graphs, charts, diagrams, Rwanda case studies and statistical data (BNR, NISR).

Topic area: MACROECONOMICS			Sub-topic area: NATIONAL INCOME	
S5: Economics	Unit 3: Consumption, saving, investment and multipliers		No. of periods:16	
Key Unit Competence: Evaluate the relationships among consumption, saving, and investment, and the multiplier's impact on the national economy.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define and distinguish consumption, saving, investment, and the multiplier; explain their roles in national income. – Explain propensities (APC, APS, MPC, MPS) and how they determine the size of the multiplier.	– Analyze data to identify consumption, saving, and investment patterns. – Calculate APC, APS, MPC, MPS, and the spending/multiplier effects from numerical problems. – Construct and interpret the consumption function $C = a + bY$ and related graphs (consumption and saving functions).	– Appreciate the role of saving and investment in development and fiscal sustainability. – Develop responsible consumption and saving habits aligned with long-term growth.	Consumption – Meaning of consumption, Consumption function and consumption curve – Average & Marginal Propensity to consume (APC, MPC) – Measures to rise the APC and MPC – Factors influencing the level of consumption	– In small groups, students conduct research using textbooks, reports (e.g., NISR, World Bank), and online sources to identify and discuss factors influencing consumption, saving, and investment, then present key findings to the class.

- Understand the theoretical bases for investment behavior (Classical, Keynesian) and the concept of leakages in the multiplier process. - Describe factors that limit consumption, saving, and investment in developing economies, with Rwanda-specific considerations. Skills	- Use spreadsheets (Excel/Google Sheets) for calculations and graphing. - Draw and interpret AD/AS implications for equilibrium national income in response to policy shocks. - Evaluate investment constraints in developing economies and propose policy solutions. - Conduct small-group research and present findings on Rwanda's investment, saving, and consumption dynamics.	- Value evidence-based policy analysis and the use of data from Rwanda (NISR, BNR) for development planning. - Foster a collaborative approach to debates on spending vs saving and investment incentives.	Saving - Meaning of saving, saving function and saving curve - Average and Marginal propensity to save - Factors and limitations of saving in developing countries Investment - Meaning and factors influencing the level of investment in an economy. - Limitations and ways of improving investment in an economy. - Investment theories - Classical theory of investment. - Keynesian theory of investment	- Using a case study, students analyze how the multiplier process increases national income, including the role of MPC, leakages (savings, taxes, imports), and time lags, and present their conclusions. - Students brainstorm constraints to the investment multiplier in Rwanda (e.g., low savings, limited credit, imports, weak infrastructure) and propose practical policy solutions to strengthen its impact. - In groups, students calculate, draw, and interpret the
--	--	---	---	--

			– Multiplier – Meaning and types of multipliers – Calculations of multiplier – Factors limiting the operation of the investment multiplier. – Meaning and calculations of accelerator principle	consumption function ($C = a + bY$) and explain its implications for income and spending behavior. – class.-In small groups, students calculate and interpret APC, APS, MPC, MPS and multipliers and make a presentation to the class.
Link to other subjects: Mathematics: Ratios, functions, and calculations ICT: Use of spreadsheets and data analysis tools Business Studies / Entrepreneurship: Investment decisions and capital formation-<i>Mathematics: Computation</i>				
Assessment criteria: Students can calculate, interpret, and evaluate the effects of consumption, saving, investment, and multipliers on national income.				
Teaching and learning materials: Textbooks (REB Economics), reference books (e.g., Samuelson, Lipsey), reports (NISR, World Bank), REB e-learning platform, calculators, spreadsheets (Excel/Google Sheets), charts, and locally prepared diagrams.				

Topic area: MACROECONOMICS		Sub-topic area: MONEY AND FINANCIAL INSTITUTIONS		
S5: Economics		Unit 4: Money		No. of periods: 14
Key Unit Competence: Evaluate the functions, characteristics, and value of money, and its role in facilitating exchange and maintaining economic stability.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the evolution of money from barter to electronic forms; distinguish different money types (commodity, metallic, paper, electronic, deposit, near money, token, fiat). – Describe the qualities and functions of good money; assess reasons for and against barter economies.	– Analyze the evolution, types, and functions of money using data and case studies. – Assess barter trade vs monetary economies through evidence-based arguments.	– Advocate for the regulation of money demand and supply to maintain purchasing power and economic stability. – Appreciate the importance of stable interest rates and choose the most appropriate type of interest for different economic situations.	Meaning and evolution of money Types of Money – (Commodity money, Convertible paper money, fractionally backed paper money, – Fiat money, Deposit money, Near money, Token money and full-bodied money)	– In small groups, students conduct documentary research on money to explain its evolution, types, qualities, and functions, then present findings to the class. – Through debates, students discuss the conditions for barter trade and evaluate its advantages and disadvantages.

- Explain Keynes's motives for holding money (transaction, precautionary, speculative). - State and interpret Fisher's equation of exchange; discuss its applicability and criticisms in developing countries. - Distinguish monetary aggregates (M1, M2, M3) and identify determinants of money supply in Rwanda. - Explain the meaning of value of money and determinants of its value. - Understand money supply, its determinants, and the effects of an increased money supply.	- Apply Keynesian and Fisherian frameworks to real-world money demand and money supply issues. - Compute and interpret interest rates; explain determinants of lending and saving behavior. - Use graphs and tables to illustrate money supply-demand relationships, inflation, and interest rate effects.	- Value transparency and accountability in financial institutions and government monetary policies. - Promote responsible saving and investment habits to support personal and national development. - Develop a positive attitude toward using money efficiently as a tool for growth and welfare.	- Qualities of Good Money and its functions. - Demand for Money (Keynesian theory of demand for money) Quantity Theory of Money - Quantity theory of money (Fisher's equation of exchange) and its assumptions - Criticisms of quantity theory of money - Value of Money	- Using a case study on demand for money, students examine Keynes' motives for holding money, state Fisher's equation of exchange, and analyze its applicability in Least Developed Countries. - Through documentary research, students distinguish between M1, M2, and M3, and describe the determining factors of money supply in Rwanda. - Using a Rwanda-based case study on bank loans, students identify types of interest rates and analyze the factors influencing lending and savings rates.
--	--	---	---	---

- Identify types of interest rates and factors that influence them; analyze the relationship between money supply, inflation, and interest rates for macroeconomic stability.them.	- Conduct policy analysis on monetary stability and financial inclusion in Rwanda. - Use digital tools (spreadsheets, charts) for calculations and visualization.	- Respect the role of the central bank and financial institutions in safeguarding monetary stability. - Encourage fairness in income distribution and recognize the impact of money management on social equity. - Choose the best type of interest	- Meaning and determinants of value of money Money supply - Meaning and levels of money supply - Importance of measuring money supply and Types of money supply - Determinants of money supply - Effects of increased money supply	- Through brainstorming, students share prior knowledge about money, banks, and economic growth, then create a concept map linking money supply, central bank, commercial banks, inflation, and Rwanda's economy. - Students use graphs and charts to illustrate the relationship between money supply, inflation, and interest rates. - In role play, students simulate how central bank policies affect commercial banks and households, to visualize the impact of monetary regulation. - Groups prepare comparison tables of barter economy versus monetary economy, highlighting efficiency, limitations, and relevance to Rwanda.
--	--	---	---	--

Link to other subjects:

- Mathematics: Interest, ratios, and time value of money
- Business Studies / Commerce: Sources of finance and banking services
- Financial Literacy: Budgeting, saving, and investment skills
- ICT / Computer Studies: Digital banking and fintech applications (AI)

Assessment criteria: Students can explain money concepts, analyze barter trade, apply Keynes and Fisher theories, distinguish money supply measures, interpret interest rates, and assess the role of money in development.

Teaching and learning materials: Textbooks, REB guides, media sources, internet access, National Bank reports, and graphs/case studies.

Topic area: MACROECONOMICS		Sub-topic area: MONEY AND FINANCIAL INSTITUTIONS		
S5: Economics	Unit 5: Financial institutions		No. of periods: 30	
Key Unit Competence: Analyse the role of financial institutions in mobilizing savings, creating credit, promoting financial inclusion and supporting economic development.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Analyze and differentiate types of financial institutions (banking and non-banking). – Evaluate the role of financial institutions in economic growth and stability.	– Analyze financial data (assets, liabilities, performance). – Interpret monetary policy effects on the economy. – Compare financial institutions and markets. – Apply financial literacy in real-life contexts.	Appreciate the role of financial institutions in development – Recognize their contribution to economic growth, stability, and poverty reduction. Develop a culture of saving and responsible financial behaviour	– Meaning & Types of Financial Institutions Banking Financial institutions Central bank – Meaning , functions and Roles of central bank – Monetary policy – Meaning and objectives of monetary policy – Tools/Instruments of monetary policy	– The teacher introduces concepts using examples/logos of Rwandan institutions (BNR, Bank of Kigali, SACCOs, Ejo Heza). – Students brainstorm how financial institutions support families and national development (Vision 2050).

– Examine operations of central and commercial banks, including assets, liabilities, and credit creation. – Assess financial intermediation and its impact on investment and development. – Apply financial literacy concepts to real-life decision-making.	– Evaluate financial inclusion and development outcomes. – Conduct research, present findings, and debate economic issues. – Assess risks and ethical implications of financial technologies.	– Value planning, discipline, and long-term financial security. Support financial inclusion and equal access to services – Promote fairness and participation of all groups in the financial system.	– Applicability and limitations of monetary policy tools in developing countries. Commercial banks – Meaning and functions of commercial banks – Assets and liabilities of commercial banks – Liquidity and profitability dilemma – Credit creation by commercial bank. – Role of commercial bank – Limitations of commercial banks in developing countries – Difference between central bank and commercial banks Non-banking financial institutions	– Group research and presentations on roles and challenges of financial institutions. Students analyze simplified bank statements. • Use flowcharts or role-play to illustrate intermediation. • Class discussion on saving, budgeting, and responsible borrowing. • Case study on Central Bank policies and their effects.
---	---	--	---	--

– Evaluate monetary policy tools and their effectiveness in developing economies. – Compare money and capital markets and their economic functions. – Analyze Rwanda's financial sector structure and inclusion initiatives. – Assess opportunities, risks, and ethical issues of AI in financial services.		Promote responsible borrowing and lending – Understand the importance of avoiding over-indebtedness and ensuring ethical practices. Value well-regulated financial markets – Appreciate the need for rules to ensure transparency, trust, and stability Encourage entrepreneurship and investment – Recognize the role of finance in business growth and job creation.	Specialized Banks, Microfinance, insurance companies and Saving and credit cooperatives (SACCOs) – Meaning and Characteristics of Non-Banking Financial Institutions (NBFIs). – Categories and Types of Non-Banking Financial Institutions in Rwanda. – Specialized Banks – Insurance Companies – Savings and Credit Cooperative Organisations (SACCOs) – Intervention Sectors of NBFIs in Rwanda	• Group research on roles and limitations of NBFIs. • Debate on the role of financial markets (e.g. CMAC). • Students analyze Rwanda's financial development and inclusion programs. • Group discussion on advantages and risks of AI.
--	--	--	--	---

		Demonstrate ethical use of technology (AI) and data privacy – Respect confidentiality, integrity, and responsible innovation. Promote accountability and trust in financial systems – Build confidence in banks and financial institutions.	– Functions, Roles and Limitations of Non-Banking Financial Institutions (NBFIs) – Financial markets – Meaning, types and terms used financial markets – Functions and limitations of financial markets in developing countries. – Financial sector in Rwanda – Artificial Intelligence (AI) in Finance and Economics – Risks & Responsible Use – Financial Literacy in Rwanda – Financial Literacy in Rwanda – AI in Finance: Risks & Responsible Use	
--	--	---	---	--

Link to other subjects:

- Mathematics: Interest, ratios, and time value of money
- Business Studies / Commerce: Sources of finance and banking services
- Financial Literacy: Budgeting, saving, and investment skills
- ICT / Computer Studies: Digital banking and fintech applications (AI)

Assessment criteria: Students can analyze the roles and operations of financial institutions, their contribution to economic growth, and the application of financial knowledge and skills in making responsible personal and financial decisions

Teaching and learning materials: Textbooks, newspapers, magazines, journals, internet resources, and audio media.

Topic area: Macroeconomics			Sub-topic area: INFLATION	
S5: Economics		Unit 6: Inflation	No. of periods: 20	
Key Unit Competence: Analyze the causes, types, and effects of inflation and its impact on purchasing power, income distribution, savings, and investment.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define inflation and related terms (price index, CPI, inflation rate; headline vs underlying inflation; creeping, walking, running, hyperinflation). – Explain methods to measure inflation (CPI, GDP deflator) and their uses and limitations.	– Calculate inflation rate using data – Examine the causes and effects of inflation on the Rwandan economy. – Evaluate who gains or losses from inflation – Evaluate effectiveness of policies and propose improvements	– Value accuracy and honesty when measuring inflation and price indices. – Appreciate the importance of price stability for families, workers, and businesses. – Show empathy toward people affected by high inflation, deflation, or rising living costs. – Value responsible government policies that control inflation and protect citizens.	– Meaning of inflation and related terminologies. (Stagflation, deflation, reflation, suppressed inflation, open inflation, underlying inflation, headline inflation, inflation spiral, etc) – Measurement of inflation – Meaning and types of price indices	– Class discussion: Share everyday examples of rising prices (food, transport, rent) to understand the meaning of inflation. – Terminology matching game: Match words like stagflation, deflation, reflation with their simple definitions. – Data exercise: Use Rwanda inflation data (2020–2025) to draw a simple line graph showing changes over time.

- Describe types of inflation by cause (demand-pull, cost-push, monetary, imported) and by intensity. - Understand the determinants and consequences of inflation for consumers, producers, and government. - Interpret historical inflation trends and major episodes, with Rwanda-specific context.	- Analyze measures to control inflation in Rwanda. - Draw Phillips Curve to apply to Rwanda - Describe the circumstances under which an increase in money supply may not lead to inflation	- Appreciate the role of data-driven decisions in planning Rwanda's economy. - Value balanced growth that avoids extreme inflation or unemployment. - Recognize the importance of cost of living indices in adjusting wages, pensions, and contracts fairly. - Appreciate the uses of price indices for comparing living standards, guiding policies, and protecting purchasing power. - Value awareness of the problems in computing index numbers (like missing data or regional differences)	- The procedures for computing cost of living index. - Uses of the price indices - Problems of computing index numbers Classifications of inflation - Classifications of inflation according to the degree of intensity. (Creeping inflation, walking inflation, running inflation and hyper-inflation) - Classifications of inflation according to the cause. (Demand pull inflation, cost push	- Group work: Calculate a basic cost of living index using a basket of goods (e.g., rice, sugar, transport, rent). - Case study: Compare how inflation affects households in rural vs. urban Rwanda. - Role-play: Act as government, businesses, and households to discuss how inflation impacts each group. - Debate: "Is demand-pull or cost-push inflation more serious for Rwanda?" - Problem-solving activity: Identify challenges in computing index numbers (like missing data or regional differences) and suggest solutions.
---	--	---	---	---

- Explain the transmission channels of money supply to inflation and the circumstances where money supply changes may not raise inflation.		- Show responsibility in spending and saving habits to reduce inflationary pressures. - Value equitable income distribution so inflation does not hurt the poorest most. - Appreciate the need to understand different types of inflation (creeping, walking, running, hyperinflation). - Recognize the causes of inflation (demand-pull, cost-push, imported, structural, monetary) and value policies that address them fairly. - Appreciate Rwanda's efforts to manage inflation rates (2020–2025) and keep the economy stable.	inflation, Profit push inflation, Structural inflation, imported inflation, monetary inflation, etc.) - Causes, Consequences and measures to solve inflation - Rwanda inflation rates (2020–2025) - Circumstances under which an increase in money supply may not lead to inflation - Classifications of inflation according to the cause. (Demand pull inflation, cost push inflation, Profit push inflation, Structural	- Classification activity: Sort examples into types of inflation (creeping, running, hyperinflation) and causes (demand-pull, cost-push, imported). - Policy brainstorming: In groups, propose measures Rwanda can use to control inflation (e.g., subsidies, monetary policy). - Reflection writing: Students write a short paragraph on how inflation affects their family's daily life.
--	--	--	---	--

		- Value awareness that sometimes more money supply does not always cause inflation, depending on circumstances. - Support fair trade-offs between growth, stability, and equality in economic planning.	- inflation, imported inflation, monetary inflation, etc.) - Causes, Consequences and measures to solve inflation - Rwanda inflation rates (2020-2025) - Circumstances under which an increase in money supply may not lead to inflation	
--	--	--	---	--

Link to other subjects:

- Mathematics: graphs and equations
- Business Studies: Pricing, wages, hiring/firing decisions
- Statistics: Measuring and forecasting trends
- ICT / Computer Studies: Digital banking and fintech applications(AI)

Assessment criteria: Students can Evaluate how inflation affects key economic variables, agents, and policies, and judge effective measures for its control.

Teaching and learning materials: Newspapers , Textbooks ,Magazines (e.g., Rwanda Business Monthly),Internet (BNR, NISR websites),Audio media (Radio news reports, Audio/Video, Internet /ICT and AI as a digital tool.

Topic area: MACROECONOMICS		Sub-topic area: UNEMPLOYMENT		
S5: Economics	Unit 7: Unemployment		No. of periods:18	
Key Unit Competence: Analyse unemployment and its implications on economic development.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Analyze the meaning, forms, and measurement of unemployment. – Differentiate between under employment and full employment. – Evaluate strategies for achieving full employment and constraints in Rwanda. – Examine types, causes, and theories of unemployment	– Analyze possible solutions or policies to reduce involuntary unemployment. – Assess the causes and effects of unemployment in the Rwandan economy. – Analyze the factors that may lead to full employment in an economy. – Analyze the reasons why it's difficult to attain full employment in Rwanda.	– Appreciate the impact of unemployment on society and development. – Develop a proactive mindset toward job creation and entrepreneurship. – Value efficient use of human resources. – Promote teamwork and collaboration in solving economic challenges.	– Meaning, forms, measurement of unemployment and employment multiplier. – Under and full employment – Difference between under and full employment – How to achieve full employment – Reasons why it is difficult to attain full employment. – Types, causes and policies to control unemployment.	– Case study: Analyze unemployment among graduates and propose solutions. – Group research: Investigate types, causes, and policies to address unemployment. – Brainstorming: Identify strategies for achieving full employment in Rwanda.

(including Keynesian and migration theories). – Assess the economic and social effects of unemployment. – Evaluate policies and strategies to reduce unemployment in developing economies. – Apply and interpret the employment multiplier. – Analyze Okun's Law in relation to output and unemployment. – Explain the trade-off between inflation and unemployment using the Phillips Curve.	– Calculate the employment multiplier. – Use illustrations to analyze the applicability of the Keynesian theory of unemployment. – Examine the causes, effects and measures to control rural urban migration in Rwanda – Calculate the employment multiplier.	– Support policies that enhance employment and inclusivity. – Maintain a realistic and solution-oriented outlook on labor market issues.	– Theories of unemployment (Keynesian unemployment theory and rural-urban migration theories) – Causes, effects and measures to unemployment problems in developing countries. – Okun's law – Unemployment and inflation: The Phillips curve	– Data interpretation: Analyze and draw the Phillips Curve; explain implications. – Debate: Evaluate causes and solutions of rural-urban migration. – Simulation: Demonstrate the employment multiplier using flowcharts. – Policy analysis: Assess effectiveness of government interventions in reducing unemployment.
--	--	---	---	--

Link to other subjects:

- Mathematics: graphs and equations
- Business Studies: Pricing, wages, hiring/firing decisions
- Statistics: Measuring and forecasting trends
- ICT / Computer Studies: Digital banking and fintech applications(AI)

Assessment criteria: Students can evaluate the impact of unemployment on economic development.

Teaching and learning materials: Newspapers, magazines, textbooks, journals, internet access and audio media.

Topic area: MACROECONOMICS		Sub-topic area:PUBLIC FINANCE AND FISCAL POLICY.		
S5: Economics		Unit 8: Public budget		No. of periods: 16
Key Unit Competence: Evaluate the role and implications of public budget in the economic development of the country.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define public finance and public budget; differentiate types of public budgets. – Explain sources of public revenue and methods to expand revenue. – Describe public debt: meaning, classifications, causes, consequences, and debt management.	– Analyse government budgets and interpret economic data. – Evaluate causes and effects of budget deficits and public debt. – Propose practical solutions to fiscal challenges.	– Appreciate budgeting as a tool for development, transparency, and accountability. – Demonstrate responsible citizenship through tax compliance and prudent public spending. – Value integrity in fiscal reporting and data-driven decision making.	Public budget – Meaning and objectives of public budget – Types of public budget (Types of public budget, why government may plan for an unbalanced budget and causes of budget deficit in developing countries, Possible solutions to reduce budget deficit – Problems of budgeting in developing countries Public expenditure – Meaning and types of public expenditure	Brainstorming: – Students brainstorm about the different objectives of the public budget. Discussion – Students discuss the different types of budget. – Causes of budget deficit in developing countries, – ways they spend their money. They discuss the meaning of public budget and types

- Understand public expenditure: meaning, types, purposes, and ways to reduce expenditure. - Explain the role of government in the economy and the budgeting process. - Identify problems of budgeting in developing countries and Rwanda-specific challenges. - Recognize and explain the meaning and use of monetary/ fiscal policy interactions in fiscal planning	- Apply knowledge of public finance to real-life situations. - Work collaboratively in discussions and presentations.	- Promote good governance, equity, and sustainable fiscal policy. borrowing and spending. - Show patriotism and willingness to contribute to national development through taxes and responsible citizenship. - Show understanding that public finance decisions affect the welfare of all citizens. - Expresses concern for ethical fiscal management	- Reasons for public expenditure and ways of reducing expenditure in developing countries. Public revenue - Meaning and sources of public revenue - Methods of expanding sources of public revenue. Public debt - Meaning and classifications of public debts - Causes and consequences of public debt in developing countries Public debt management - -Meaning and objectives of public debt management - Burden of the public debt and methods of clearing public debts	Documentary research - Students conduct research on Rwanda's major revenue sources (taxes, fees, aid, etc) and make presentations. Debate - Problems of budgeting in developing countries Group discussion - Students discuss the types, role and impact of government expenditure on national development and equity in Developing countries.
--	--	--	---	--

Link to other subjects:

- Accounting & Auditing: (example: Techniques for budget preparation, expenditure tracking, and fiscal reporting)
- Statistics (e.g.: Budget forecasting, debt analysis, and economic data interpretation).
- Public Administration / Political Science (example: Policymaking, governance, and implementation of fiscal policies).
- Entrepreneurship & Business Studies (example: Links between government revenue/expenditure and private sector growth)
- Geography (example Resource distribution and economic disparities influencing public revenue).
- ICT / Data Management (example Use of software for budget analysis, e-government systems, and financial transparency tools).

Assessment criteria: Students can evaluate the role and implications of public budget and public debt in economic development of the country.

Teaching and learning materials:

- ICT tools: Projector, laptop, internet access and smartboard
- Print materials: Textbooks, journals, official budget documents and newspaper articles
- Community-based learning: Field trips to local government offices and guest speakers (economists, budget officers)

Topic area: MACROECONOMICS7			Sub-topic area: PUBLIC FINANCE AND FISCAL POLICY.	
S5: Economics		Unit 9: Taxation.		No. of periods: 16
Key Unit Competence: Analyse different types and principles of taxation and their impact on equity, efficiency, government revenue, and economic behaviour.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Analyze the meaning and key concepts of taxation. – Evaluate causes and effects of tax evasion in developing economies. – Assess the purposes and principles of taxation in promoting equity and efficiency.	– Analyze taxation systems and their economic implications. – Classify and interpret different types of taxes. – Evaluate fiscal policy decisions in real-world contexts.	– Appreciate the role of taxation in government revenue and advocate for tax assessment and collection improvement. – Appreciate the importance of taxation as a tool for government revenue and social welfare improvement and Advocate for Public	– Meaning of taxation and terminologies used – Reasons and effects of tax evasion – Purposes and principles of taxation Classifications of taxes	– Brainstorming: Students discuss what “tax” means and share family experiences with paying taxes and end up with definitions of tax and other related terminologies. – Role Play: One group plays RRA officers, another plays business owners — act out situations leading to tax evasion and discuss reasons of tax evasion in their communities (Why do some Rwandans or businesses evade taxes)

- Analyze the effects of taxation on production, consumption, and income distribution.	- Propose practical solutions to improve tax systems. - Apply taxation concepts to personal and business situations. - Conduct research, present findings, and engage in debates.	education as the best way to improve tax collection in Rwanda". - Advocate for ethical tax behavior and citizens' responsibility in contributing to Rwanda's fiscal sustainability. - Appreciate the importance of paying taxes truthfully and advocate for avoiding corruption or evasion.	- Classifications of taxes according to the rate (Progressive tax, regressive tax, de-regressive tax and proportional tax) - Classifications of taxes according to the intensity (Direct and indirect taxes) - Effects of taxation	and the purposes of taxation in an economy particularly in Rwanda. - Documentary research: - Students will undertake documentary research on principles of taxation/ canons of taxation and present their findings. - Card Sorting: Students receive cards with tax levied in Rwanda (VAT, income tax, import duty, property tax) and sort them into direct and indirect categories - Simulation: Groups play roles of government, consumers, and firms to show tax impacts. - Group Brainstorm: Students identify problems encountered by taxation in Rwanda (e.g., informality, evasion, limited tax base) and suggest possible policies to improve tax collection.
--	---	---	--	--

– Examine the structure of taxation, with application to Rwanda. – Evaluate challenges facing tax systems in developing countries and propose solutions. – Compare taxation financing with debt financing in public finance. – Analyze fiscal policy tools and their role in economic stabilization and growth.		– Demonstrate collaboration and critical thinking in group discussions on fiscal policy challenges in Rwanda.	– Problems facing taxation and policies to improve tax collection in developing countries – Taxation financing and debt financing Fiscal policy – Meaning, tools and forms of fiscal policy Structure of taxation in Rwanda – Meaning of tax structure and tax structure in Rwanda – Effects of tax structure	– Debate opposing two groups: On one side, students support that a country may prefer debt financing and another one may prefer over taxation financing on the other side. The teacher plays the moderation and facilitation role and they end up with advantages and disadvantages of both over taxation and debt financing. – Documentary research: Students discuss the functions, tools and forms of fiscal policy. (how fiscal policies work, tools of fiscal policy and their effects on the economy) and present the findings, Simulation: Students act as government decision-makers during inflation or recession.
--	--	---	---	--

Link to other subjects:

- **Entrepreneurship:**(example: Understanding taxation obligations of businesses and the role of tax compliance in entrepreneurship.
- **Civic and Citizenship Education:**(example: Links to the duties and responsibilities of citizens, including paying taxes and holding government accountable.
- **Mathematics:** (example: Calculation of taxes (VAT, income tax rates, percentages, progressive tax systems).
- **Geography:** (example: Examines regional development supported by tax-funded infrastructure (roads, schools, health centers).
- **ICT / Computer Studies:** (example: Use of technology in tax collection (e-filing, digital payments, RRA online services).
- **Social Studies:** (example: Understands how government policies affect social services, equality, and welfare of population)

Assessment criteria: Students can Analyze the role of taxation and fiscal policy in economic development by examining their impact on revenue, resource allocation, public spending, and economic growth.

Teaching and learning materials:

- Print and text materials:
- Textbooks and reference books on Economics and Public Finance
- Rwanda Revenue Authority (RRA) reports, brochures, and publications
- Government policy documents (e.g., National Budget, Fiscal Policy Framework, Vision 2050)
- Newspapers and magazines with articles on tax, government revenue, and public projects.

Digital and Audio-Visual Materials:

- Documentaries or short videos on RRA operations, taxation process, and fiscal policy in Rwanda
- Projector/computer for presentations and simulations
- Online resources from RRA website and National Bank of Rwanda (BNR)

Research Materials:

- Internet access or library resources for documentary research on taxation and fiscal policy
- Statistical reports (e.g., tax revenue data, public expenditure reports)

Topic area 3: MACROECONOMICS			Sub-topic area: POPULATION, LABOUR AND WAGES	
S4: Economics		Unit 10: Population.		No. of periods:20
Key Unit Competence: Assess population size, structure, and growth and their implications for economic development, resource use, and employment.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define key population concepts: population, density, dependency ratio, census, population pyramid, aging/declining population, etc. – Explain reasons for conducting population censuses and common census challenges.	– Analyze population data to interpret trends, structures, and distribution (e.g., construct and read population pyramids). – Calculate population density and population growth rate.	– Be aware of the impact of population growth on an economy and advocate for population control measures. – Respect for national efforts in planning and data collection	– Meaning of population and terminologies (Population census, Population distribution, Population growth, Doubling time Population density, Population pyramid, Dependence ratio, Ageing population, Declining population)	– Documentary research: analyze Rwanda’s population structure, trends, and distribution; present implications for development. – Census discussion: brainstorm purposes and problems of population censuses; propose improvements. – Case study: Rwanda and other countries—factors and impact of population growth on the economy.

- Describe population structures and interpret population pyramids. - Explain how population growth affects the economy and development. - Explain Malthusian theory, its applicability and limitations, and relate to demographic transitions. - Distinguish between underpopulation, optimum population, and overpopulation.	- Assess economic implications of population size, structure, and dependency ratios. - Evaluate causes and effects of population growth and demographic changes. - Propose realistic, data-driven strategies to manage population growth and enhance welfare in Rwanda and similar contexts.	- Develop a sense of civic duty and cooperation with the government. - Demonstrate Integrity in providing accurate information. - Show concern for sustainable resource use. - Have an open mindedness and critical thinking about economic theories. - Develop a sense of fairness in re-source allocation.	- Populations census - NISR Population Census Statistics Data (2022) - Reasons for carrying out population census and difficulties met in population census. Population pyramid - Types of population pyramid and their implications Population growth - Meaning, Types and causes of population growth. - Effects and measures to control high population growth	- Calculation exercise: compute population growth rate and density from given data; interpret policy implications. - Population theories debate: assess applicability of Malthusian theory and demographic transition in developing contexts. - Glossary creation: small groups define terms and compile a class glossary. - Density mapping: use maps to calculate and compare provincial population density in Rwanda. - Dependency ratio analysis: discuss youth and elderly dependencies with real data; consider policy responses.
---	--	--	--	---

- Understand demographic terms: doubling time, population distribution, and aging population.	- Apply population theories to real-world developing country cases.		Population density - Consequences of densely and sparsely populated areas An ageing and declining population - Meaning and their implications - Population theories - Malthusian population theory - Demographic transition model - Marxist population theory - Optimum population theory - Population structure of Rwanda	- Data visualization: create charts showing population growth, age structure, and potential labor force trends. - Policy synthesis: propose population-related strategies (education, health, family planning, urban planning) aligned with development goals.
---	---	--	--	---

Link to other subjects:

- Mathematics/Statistics: Growth rates, dependency ratios, projections
- Geography: Population distribution, migration, urbanization
- History: Historical population trends, migration, famines

Assessment criteria: Students can Analyse the effects of population growth and structure on economic development by examining their impact on economic sectors and resource availability.

Teaching and learning materials:

Textual materials (, magazines, newspapers, and economic journals);

Audio-visual-materials (Youtube); ICT and digital tools (internet access, Laptops, projectors, Excel, or Google Sheets, Print and illustrative materials, Field and community resources; Teacher-made materials (Simplified worksheets, case studies, mock census forms, rubrics) Etc.

TOPIC AREA 3: MACROECONOMICS			SUB-TOPIC AREA: POPULATION, LABOUR AND WAGES	
S5: Economics		Unit 11: Labor and wages		No. of periods: 24
Key Unit Competence: Evaluate labour and wage determination and their implications on the labour market, including effects on employment, income distribution, and market efficiency				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Analyze characteristics of the labour force in developing countries using real-world examples. – Examine factors influencing labour demand, supply, efficiency, and mobility in Rwanda.	– Analyze the impact of labor mobility on employment, income distribution, and economic growth. – Analyze methods of wage determination in different economies, including Rwanda.	– Acknowledge the role of labor mobility in solving manpower problems in Developing countries. – Develop fairness, respect for labor, appreciation of worker rights, teamwork, and social responsibility.	Meaning and categories of labour Labour force – Meaning (Labour force and work force) and determinants labour force – Demand for labour (Meaning and factors) – Labour supply (Meaning and factors) – Efficiency of labour (Meaning and factors)	– In small groups, students undertake documentary research on labor in Developing Countries and discuss categories of labour, characteristics of the labour force, factors influencing labour demand, supply, efficiency and mobility, and causes of manpower problems in Developing countries. Students present their findings to the class.

– Assess manpower problems and propose solutions in developing economies. – Evaluate methods and theories of wage determination. – Analyze causes and effects of wage differentials. – Evaluate forms of wage control and their economic implications. – Analyze the role, tools, and effectiveness of trade unions.	– Analyze how to apply wage theories, including the backward-bending supply curve to labor markets in Developing countries – Assess the effects of wage differentials in economies particularly in the Rwandan economy. – Evaluate forms of wage control and their effects on workers, employers and economic performance.	– Demonstrate appreciation for the role of trade unions in promoting fairness, wage equality, and workers' rights.	Labour mobility – Meaning and forms of labour mobility – Geographical mobility of labour – Occupational mobility Manpower problems in developing countries – Meaning and causes of manpower problems in developing countries. – Effect and Measures to reduce manpower problems in developing countries. Wages – Meaning and forms of wages – Methods of wage determination	– students undertake documentary research on wages and explain the methods of determining wages, the applicability of wage theories, and the causes of wage differentials in an economy. – In small groups, students discuss the forms of wage control and their effects. – In small groups, Using a case study on trade unions (East African region) students discuss the objectives, types, tools, benefits, disadvantages, and how trade unions bridge wage gaps. – Wage theories (The marginal productivity theory of wages, wages Fund Theory, bargaining
--	--	--	---	---

– Assess the impact of labour mobility and wage policies on economic growth and equity.	– Analyze the operation of trade unions in an economy. – Assess the impact of trade unions on the efficiency of labor. – Analyze manpower problems in developing countries.		- theory of wages, Iron's law of wages, residual claimant theory) – Wage differentials – Meaning and causes of wage differentials – Wage controls – Trade unions – Meaning, objectives and types of trade unions – Tools/Methods used by trade unions to achieve their objectives – Weaknesses of trade union in developing countries	
---	---	--	--	--

Links to other subjects:

- Mathematics/Statistics: Growth rates, dependency ratios, projections
- Geography: Population distribution, migration, urbanization
- History: Historical population trends, migration, famines

Assessment criteria: Students can Analyze labor and wage determination and their implications on the labour market, including their effects on employment, income distribution, and market efficiency.

Teaching and learning materials: Internet access, economic magazines, newspapers, and journals.

SENIOR SIX

5.4 Economics Syllabus for Senior Six

Student's profile

- Analyze the importance of international trade to the development of the Rwandan economy.
- Analyze the effects of free trade and trade protectionism on a country's economy
- Analyze the Terms of Trade and their effects on a country's economic performance and development.
- Analyze the Balance of Payments and its implications for a country's economic stability and development.
- Evaluate the role of foreign exchange in international trade and its influence on a country's overall economic stability
- Assess the contribution of economic integration in regional and global development.
- Evaluate the effects of globalization on Rwanda and other developing economies. –
- Evaluate economic growth, underdevelopment, and economic development and their implications for living standards and long-term progress.
- Evaluate the contribution of agricultural development strategies to the economy.

- Analyse the contribution of industrial development on the economy.
- Critically evaluate development strategies and their effectiveness in promoting sustainable economic growth and improved living standards.
- Assess economic planning and its role in guiding resource allocation, economic growth, and national development.
- Evaluate the contribution of the various sectors of the Rwandan economy to national income, employment, and overall economic development.
- To dedicate various forms of exchange rate determination and their impact in economic development
- To analyze the indicators and determinants of economic growth and development in an economy.
- To Execute the contribution of Agricultural development strategies on the economy
- Evaluate the application of economic planning in achieving national goal

Summary students profile

1. Analyze the importance of international trade to Rwanda's economic growth.

Analyze the impacts of international trade policy to the development of the Rwandan economy.

Assess how terms of trade, free trade, and protectionism affect the development of Developing countries (DCs). *(Combines: importance of international trade + terms of trade + free trade/protectionism)*

2. Examine the balance of payment position of Rwanda and other Developing countries (DCs).

Explain various forms of exchange rate determination (Evaluate the impact of exchange rate systems on economic performance)and their impact on economic development. Analyze the Balance of Payments and its implications for a country's economic stability and development.

3. Evaluate the impact of globalization and regional economic integration on the development of Rwanda's economy.

Evaluate the role of foreign exchange in international trade and its influence on a country's overall economic stability.

4. Analyze the key indicators and determinants of economic growth and development.
5. Assess the role and application of economic planning (- Evaluate the role of planning in achieving Rwanda's Vision 2050 in Rwanda and other Developing countries (DCs). (Combines: growth/development indicators + planning
6. Evaluate the contribution of agricultural development strategies in economic transformation to Rwanda's economic growth and overall development

Topic area: MACROECONOMICS			Sub-topic area: INTERNATIONAL ECONOMICS	
S6: Economics		Unit 1: INTERNATIONAL TRADE		No. of periods: 24
Key Unit Competence: <i>Justify the effectiveness of Rwanda’s international trade policies in driving national economic development.</i>				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define international trade and explain key terms (imports, exports, balance of trade, comparative advantage). – Explain the differences between international trade and domestic trade. – Identify and describe the forms of international trade (visible and invisible trade).	– Compare and contrast international trade with domestic trade using real examples. – Analyze the benefits and limitations of international trade for Rwanda.	– Appreciate the importance of international trade for Rwanda’s economic development. – Develop a positive attitude towards trade as a driver of national growth.	Nature and Importance of International Trade – Meaning, terminologies and differences between domestic trade and international trade. – Forms and need for International Trade. – Advantages, disadvantages, and limitations of international trade. Theories of International Trade – Theory of absolute advantage (meaning, assumptions and criticisms)	– Through brainstorming: students discuss goods that Rwanda imports and exports, then discuss why countries trade. – Group Research: In manageable groups, students research a Rwandan export (e.g., coffee, tea, minerals) and present how it earns foreign exchange and benefits the economy.

- Explain the need/reasons for international trade. - State the advantages, disadvantages, and limitations of international trade. - Explain the theory of absolute advantage with examples. - Describe the theory of comparative advantage, its relevance, criticisms, and factors that determine it.	- Apply the theory of comparative advantage to evaluate Rwanda's trade decisions. - Calculate simple trade balances and interpret trade data. - Assess the relevance and limitations of trade theories to developing countries.	- Show respect for global trading partners and the value of mutual economic cooperation. - Be aware of the challenges of trade and advocate for fair trade practices. - Value evidence-based reasoning when evaluating international trade theories.	- Theory of comparative advantages. (meaning, assumptions, relevance/ applicability; criticisms/ limitations; factors that determine comparative advantage) International trade policy - Free trade (meaning and Impacts of free trade) Trade protectionism - Meaning and reason for trade protectionism - Tools of trade protectionism - Advantages and disadvantages of trade protectionism Commercial policy - Meaning, objectives and tools of commercial policy. - Advantages and disadvantages of commercial policy	- Case Study: Analyze a simplified trade scenario between two countries to apply the theory of absolute advantage and then the theory of comparative advantage. - Class Discussion: Students debate 'Is international trade more beneficial or harmful to Rwanda?' and justify their positions with evidence. - Documentary Research: Students use internet/ textbooks to research Rwanda's top trading partners and present findings to the class.
---	---	--	---	---

Link to other subjects: Entrepreneurship/Business Studies: Teaches how businesses engage in international markets and manage trade logistics, History: Shows how historical trade routes and colonialism shaped current trade relations. Mathematics: Used to calculate trade balances, tariffs, exchange rates, and economic indicators. Geography: Explains how natural resources, climate, and location influence trade patterns.

Assessment criteria: Students can justify the effectiveness of Rwanda's international trade policies in driving national economic development.

Teaching and learning materials: Newspapers, journals, magazines, audio media, internet access, Government trade reports and policy documents

Topic area: MACROECONOMICS			Sub-topic area: INTERNATIONAL ECONOMICS	
S6 : Economics		Unit 2: BALANCE OF PAYMENT (BOP)		No. of periods:17
Key Unit Competence: Critique the causes of Rwanda’s Balance of Payments disequilibrium and defend appropriate corrective measures.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define Balance of Payment (BOP) and explain key terminologies (current account, capital account, financial account). – Distinguish between Balance of Trade (BoT) and Balance of Payment (BoP). – Describe the structure of BOP accounts and explain each component.	– Construct and interpret a simplified BOP statement using given data. – Distinguish between current account, capital account, and financial account entries.	– Appreciate the importance of maintaining a sound BOP for Rwanda’s economic stability. – Develop concern for the structural challenges that cause persistent BOP deficits in Developing countries (DCs). – Show commitment to supporting export-led growth and import substitution strategies.	Balance of Payment – Meaning, terminologies and difference between Balance of Payment (BoP) and Balance of Trade (BoT). Structure of Balance of Payment (BoP) Accounts – BoP Accounts – Financing BOP deficit and Surplus – BoP Position for DCs (Causes of BoP Problems in Developing Countries, Rwanda’s Position)	– Introductory Activity: Students brainstorm different types of international transactions Rwanda engages in and classify them into current, capital, or financial account. – Case Study Analysis: Groups analyze Rwanda’s BOP data from BNR annual reports and identify trends in deficits or surpluses. – Role Play: Students act as exporters, importers, investors, and government officials in a simulated BOP scenario and record transactions in appropriate accounts.

– Explain the concept of BOP deficit and surplus, and why the BOP always balances. – Identify the causes of the BOP deficit in developing countries. – Describe the effects of a BOP deficit and the measures to correct it. – Explain Rwanda's BOP position and its implications.	– Analyze the causes and effects of the BOP deficit in Rwanda and other developing countries. – Evaluate measures governments use to correct BOP deficits. – Use charts and statistics from BNR/ NISR to analyze Rwanda's BOP position.	– Value transparency and sound management of a country's external accounts. – Be aware of Rwanda's external economic position and advocate for policies that strengthen it.	– Effects and measures to BOP problem in Developing countries. Changes in BoP – Cause of the changes of BOP in developing countries – Nature of Terms as a cause of changes in BOP for developing countries (Meaning, forms, nature, causes, limitations and measures to address deteriorating terms of trade on BOP for Developing Countries)	– Group Research & Presentation: Students research the causes of BOP deficits in Developing countries (DCs) and propose corrective measures applicable to Rwanda. – Problem Solving: Using hypothetical data, students calculate BoT and BoP values, determine whether there is a deficit/surplus, and suggest remedies.
---	---	--	---	---

Link to other subjects: ICT: Use of data tools to analyze BOP statistics, Mathematics: Calculation of trade balances and percentages Economics: National income, foreign exchange markets Geography: Trade routes, resources, and export commodities

Assessment criteria: Students can critique the causes of Rwanda's Balance of Payments disequilibrium and defend appropriate corrective measures.

Teaching and learning materials: Economics Textbooks: Provide definitions, structure, and examples of BOP and related concepts, Charts and Diagram; Show structure of BOP accounts (Current, Capital, Financial accounts, Field trips to ports, customs offices, or manufacturing/export industries, Role Play Cards: Students act as exporters, importers, or government officials managing BOP

Topic area: MACROECONOMICS			Sub-topic area: INTERNATIONAL ECONOMICS	
S6: Economics		Unit 3: FOREIGN EXCHANGE		No. of periods: 22
Key Unit Competence: Critique the suitability of foreign exchange regimes in sustaining Rwanda’s economic stability and competitiveness in international trade.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define foreign exchange and explain key terms (exchange rate, forex reserves, devaluation, revaluation). – Identify sources of foreign exchange for Rwanda and factors that influence exchange rates.	– Compare and contrast different exchange rate regimes and evaluate their suitability for developing countries. – Analyze how exchange rate changes affect Rwanda's imports, exports, and overall economic performance.	– Appreciate the role of foreign exchange in sustaining Rwanda’s international trade and development. – Develop a critical view of exchange rate policies and their effects on different sectors of the economy. – Show concern for the challenges of forex shortages and their impact on importers and businesses.	Introduction to foreign exchange – Meaning, terminologies, sources and factors that influence foreign exchange. Types of Exchange rate regimes – Gold exchange (Meaning, Advantages, and Disadvantages) – Fixed Exchange rate regime (Meaning, Advantages, and Disadvantages; and devaluation)	– Introductory Activity: Students check current USD/RWF exchange rates and discuss what influences daily changes. – Group Analysis: In groups, students compare two exchange rate regimes (e.g., fixed vs. flexible) and evaluate which is more suitable for Rwanda, presenting arguments to the class.

- Describe the types of exchange rate regimes: gold exchange, fixed, flexible, and managed. - Explain the meaning, advantages, and disadvantages of foreign exchange liberalization. - Explain foreign exchange reserves: meaning, importance, and causes of shortages in DCs.	- Evaluate the advantages and disadvantages of foreign exchange liberalization for Rwanda. - Interpret foreign exchange data from BNR to assess the strength of the Rwandan franc. - Assess the causes and consequences of foreign exchange shortages in developing countries.	- Value stable exchange rate management as a foundation for economic confidence. - Be willing to advocate for policies that increase Rwanda's foreign exchange earnings (e.g., tourism, exports, FDI).	- Flexible Exchange rate regime (Meaning, Advantages, and Disadvantages; and depreciation) - Managed Exchange rate regime (Meaning, Advantages, and Disadvantages) Foreign Exchange Liberalization (Meaning, Advantages, and Disadvantages) Foreign Exchange Reserves - Meaning and importance of foreign exchange reserves - Causes of foreign exchange shortages in DCs	- Case Study: Students analyze the impact of devaluation on Rwanda's exports and imports using a simplified scenario. - Research and Presentation: Groups research Rwanda's main sources of foreign exchange (tourism, remittances, coffee/tea exports) and present data on their trends. - Problem Solving: Students use hypothetical exchange rate data to calculate how a depreciation of the Rwandan franc affects the cost of imports and earnings from exports.
--	--	---	---	---

– Describe foreign exchange control: meaning, reasons, advantages, and disadvantages.			Foreign exchange control – Meaning and reason for foreign Exchange control – Advantages and Disadvantages of foreign exchange	
Link to other subjects: – Mathematics and: graphs and statistics, accounting / principles of accounting, entrepreneurship and I.C.T science and Technologies Supports technological exchange and innovation across borders, – Entrepreneurship/Business Studies: Encourages global market expansion and competitive pricing – Protectionism: Focuses on local market strategies and government support for startups – Geography: Explains how location, resources, and trade routes influence exchange between regions				
Assessment criteria: Students can critique the suitability of foreign exchange regimes in sustaining Rwanda's economic stability and competitiveness in international trade.				
Materials: Chalkboards, chalk, textbooks, markers, rulers, flipcharts, and a computer and projector				

Topic area:: MACROECONOMICS		Sub-topic area: INTERNATIONAL ECONOMICS		
S6: Economics		Unit 4: ECONOMIC INTEGRATION AND GLOBALIZATION		No. of periods: Periods: 24
Key Unit Competence: Appraise the contribution of economic integration and globalization to regional and global development and their strategic implications for Rwanda’s economy.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define economic integration and explain its main objectives. – Identify and describe the conditions necessary for successful economic integration. – Describe the levels/ stages of economic integration (PTA, FTA, Customs Union, Common Market, Economic Union, Political Union).	– Distinguish between the different levels of economic integration with relevant examples. – Analyze the benefits and challenges that Rwanda experiences within EAC and COMESA.	– Appreciate the role of economic integration in promoting regional development and peace. – Develop a positive attitude towards pan-African cooperation and regional solidarity. – Show willingness to support Rwanda’s active participation in EAC and AfCFTA.	Economic integration – Meaning, examples, and Objectives of Economic Integration – Conditions and levels (stages) for a successful economic integration – Advantages, disadvantages and limitation of economic integration	– Map Activity: Students locate EAC and COMESA member states on a map and discuss trade flows between Rwanda and its partners. – Case Study: Groups analyze the trade benefits Rwanda has gained from EAC membership (e.g., free movement of goods, common tariffs) and present findings. – Debate: ‘Economic integration benefits Rwanda more than it costs.’ Students argue for and against using real evidence.

– State the advantages, disadvantages, and limitations of economic integration. – Explain Rwanda's membership in regional economic blocs (EAC, COMESA, AfCFTA). – Define globalization and describe its main features (interconnectedness, global markets, free flow of capital, people, and information). – Identify and explain the types of globalization (economic, political, cultural, technological).	– Evaluate the conditions that must be met for integration to succeed in Africa. – Assess the contribution of regional trade blocs to Rwanda's economic development. – Present arguments for and against deeper economic integration for developing countries. – Analyze the positive and negative effects of globalization on Rwanda's economy.	– Value regional trade as a pathway for expanding Rwanda's markets and opportunities. – Be aware of the sovereignty trade-offs in economic integration and advocate for balanced policies. – Appreciate the opportunities that globalization presents for Rwanda's economic growth. – Develop a critical and balanced view of globalization, acknowledging both its benefits and challenges.	Globalization – Meaning, features and types of Globalization – Causes and Effects of globalization – Global Business and Investment (MNCs and FDI's) – Bretton Woods institutions (IMF and World Bank/ IBRD)	– Research & Presentation: In groups, students research one regional bloc (EAC, COMESA, or AfCFTA) and present its objectives, achievements, and challenges. – Group Discussion: Students identify Rwandan entrepreneurs or products that have benefited from regional integration (e.g., Made in Rwanda goods sold in EAC countries). – Introductory Activity: Students identify global brands they use daily and trace how globalization brings those products and services to Rwanda.
---	---	---	---	--

- Explain the causes and effects of globalization on developing countries including Rwanda. - Define MNCs and explain their positive and negative effects on host countries. - Explain FDIs: meaning, effects, hurdles, and measures to attract foreign investors in Rwanda. - Describe the Bretton Woods institutions: IMF (objectives, functions, SAPs) and World Bank/IBRD (objectives, functions).	- Evaluate the role of MNCs and FDIs in Rwanda's development and identify associated risks. - Assess the conditions Rwanda needs to attract and retain foreign investors. - Critically evaluate the role of the IMF and World Bank in supporting or constraining developing economies.	- Show awareness of the risks of economic dependence on foreign capital and multinational corporations. - Value innovation, ICT, and entrepreneurship as tools for benefiting from globalization. - Be willing to advocate for policies that ensure Rwanda benefits equitably from global economic integration.	- Group Research: In groups, students investigate a multinational company operating in Rwanda (e.g., MTN, Volkswagen Assembly, Bralirwa) and analyze its benefits and challenges to the Rwandan economy. - Case Study – FDI in Rwanda: Students analyze a real FDI project in Rwanda (e.g., Kigali Innovation City) and evaluate its economic impact. - Debate: 'Globalization has brought more harm than good to developing countries.' Students argue both sides using evidence from Rwanda and other Developing countries (DCs).
---	--	---	---

	– Use current data and examples to illustrate Rwanda's integration into the global economy.			– Research & Presentation: In groups, students research either the IMF or World Bank's role in Rwanda and present on SAPs, loans, and development programs, evaluating their effectiveness.
--	---	--	--	---

Link to other subjects:

Mathematics: Trade data, economic indicators, statistics,

ICT and internet: Using internet resources to find COMESA/EAC statistics; creating PowerPoint or infographic presentations.

Entrepreneurship / Business Studies: Regional markets, export opportunities, business competition, Case study of Rwandan entrepreneurs trading within the EAC or COMESA (e.g., Made-in-Rwanda products).

Assessment criteria: Students can Appraise the contribution of economic integration and globalization to regional and global development and their strategic implications for Rwanda's economy.

Teaching and learning materials: Maps and globes, Newspapers and magazine, Computers, projectors, internet access, Google Maps for locating member state, Computers, projectors, internet access, Google Maps for locating member states.

Topic area: DEVELOPMENT ECONOMICS			Sub-topic area: DEVELOPMENT ECONOMICS	
S6: Economics		Unit 5 : ECONOMIC GROWTH, UNDERDEVELOPMENT AND ECONOMIC DEVELOPMENT		No. of periods: 34
Key Unit Competence: Apply concepts of economic growth, underdevelopment, and economic development to address challenges affecting living standards in Rwanda.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Define economic growth and explain how it is measured. – Describe the factors that determine economic growth. – Explain the merits and costs of economic growth. – Identify measures used to promote economic growth.	– Analyze the factors influencing economic growth in different economies. – Evaluate the benefits and costs of economic growth on living standards.	– Appreciate the importance of economic growth and development in improving living standards. – Develop concern for issues related to poverty and underdevelopment.	Economic Growth – Meaning and measure of economic growth – Determinants/ factors and measures for promotion of economic growth – Merits/benefits and Costs of economic growth	– Through brainstorming economic growth, then used to promote economic growth and evaluate their effectiveness. – Examine scenarios where economic growth does not lead to development through guided discussion and examples.

- Explain circumstances where economic growth may occur without economic development. - Describe major theories of economic growth, including sector balancing and causes of growth. - Define underdevelopment and explain its indicators. - Identify causes of underdevelopment. - Describe policies that can be used by Rwanda to address underdevelopment. - Define poverty and describe its characteristics and types.	- Assess policies and strategies used to promote economic growth. - Analyze situations where growth does not lead to development. - Compare and evaluate different theories of economic growth. - Interpret data related to growth, development, and poverty indicators.	- Show a positive attitude towards policies that promote sustainable development - Demonstrate critical thinking when evaluating economic theories and policies. - Value evidence-based reasoning in analyzing economic issues.	- Circumstances under which economic growth may occur without corresponding economic development Theories of economic growth: - Theories based on sector balancing (Balanced, unbalanced and Big push theory) - Theories based on causes of growth. (Rostow's stages of growth, Karl Marx, Dependence theory) Underdevelopment - Meaning and indicators of underdevelopment	- Compare and present theories of economic growth (sector balancing and causes of growth) using charts or diagrams. - Identify and discuss indicators and causes of underdevelopment through group work and class presentations. - Analyze Rwanda's policies aimed at reducing underdevelopment and present findings. - Brainstorm the meaning, types, and characteristics of poverty and illustrate the vicious cycle of poverty using diagrams. - Discuss and evaluate different strategies for poverty reduction using real-life examples.
---	---	---	--	---

- Explain the vicious cycle of poverty. - Identify ways of reducing poverty. - Define economic development and explain its objectives. - Describe requirements for economic development. - Identify indicators of economic development. - Differentiate between economic growth and economic development	- Analyze causes and effects of underdevelopment in developing countries. - Evaluate policies aimed at reducing underdevelopment in Rwanda. - Examine the causes and consequences of poverty. - Assess strategies for poverty reduction and their effectiveness.	- Show responsibility and willingness to contribute to national development- - Respect diverse views during discussions on economic challenges and solutions. - Develop awareness of the need for inclusive and equitable economic progress	- Causes and Policies that can be undertaken by Rwanda to solve underdevelopment of underdevelopment Poverty - Meaning, characteristics, and types of poverty - Ways of reducing poverty Economic Development - Meaning and objectives/goals of economic development - Factors and Indicators of economic development	- Define economic development and identify its objectives and indicators through guided learning activities. - Compare economic growth and economic development using tables and real-world examples. - Conduct a mini-project analyzing a country's growth and development status and present conclusions. - Engage in reflection and discussion on how economic growth and development impact living standards and long-term progress. interpret simple data/ graphs showing growth trends.
---	---	---	---	--

	– Compare economic growth and economic development using real-life examples. – Apply economic concepts to real-world development issues.		– Comparison between economic growth and economic development	– Discuss and analyze factors that influence economic growth using real-life examples from Rwanda and other countries. – Work in groups to identify and present the benefits and costs of economic growth using case studies. – Analyze different government measures
--	---	--	---	---

Link to other subjects: Entrepreneurship: social responsibility and development. Geography: development

Environmental Studies: Balances growth with sustainability and resource management. ICT (Information and Communication Technology): Drives innovation, productivity, and access to global markets Mathematics: Used to analyze economic data, model growth trends, and calculate.

Assessment criteria: Students can apply concepts of economic growth, underdevelopment, and economic development to address challenges affecting living standards in Rwanda.

Teaching and learning materials: *Newspapers, journals, magazines, audio media, internet access, and map extracts.*

Topic area: MACROECONOMICS			Sub-topic area DEVELOPMENT ECONOMICS	
S6: Economics		Unit 6: AGRICULTURAL DEVELOPMENT		No. of periods: 24
Key Unit Competence : Appraise the effectiveness of agricultural development strategies in addressing food security, employment, and sustainable economic growth in Rwanda.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the meaning of agriculture and Agricultural development – Identify the characteristics of agriculture in DCs – Identify the merits and demerits of agricultural development. – Explain the different approaches of agricultural development.	– Analyze strategies of development in the economy. – Touch on the Approaches to Agriculture Development – Assess the merits and demerits of agricultural development in Rwanda.	– Acknowledge the goals of development strategies in the economy and support the development strategies adopted by the country. – Contribute to agricultural development in the Rwandan economy.	Introduction to Agricultural Development – Meaning, objectives and characteristics of agricultural development . – Advantages and Disadvantages of Agriculture development. Approaches to Agricultural Development	– Brainstorm and define economic growth, then interpret simple data/graphs showing growth trends. – Discuss and analyze factors that influence economic growth using real-life examples from Rwanda and other countries. – Work in manageable groups to identify and present the benefits and costs of economic growth using case studies. – Analyze different government measures used to promote economic growth and evaluate their effectiveness.

– Explain how land is owned and used in Rwanda. – Describe SMART Nkunganire System (SNS to boost Agriculture productivity, A digital subsidy platform using AI and data analytics to register farmers, track fertilizer distribution, and improve efficiency in agricultural input – Discuss characteristics of agriculture in developing countries. – Explain the ways of improving agricultural products in Rwanda	– Analyze the applicability of agricultural development approaches in Rwanda. – Using AI and drones to deliver agricultural and medical supplies to remote areas, reducing delivery time and supporting rural productivity. – Analyze the characteristics of agriculture in Least Developed countries	– Appreciate the contribution of land reforms in the development of agriculture in Rwanda. – Promoting environmentally sound and socially responsible agricultural practices – Be willing to learn new technologies and adapt to modern farming methods – Show commitment to environmentally responsible and resource-efficient farming.	– Modernization Approach (Agriculture mechanization, Intensive agriculture, Agriculture research and extension services,) – Transformation Approach (Small-scale subsistence production, Large-scale commercial production, Extensive agriculture, Agriculture specialization, Agriculture diversification, Agriculture Cooperatives)	– Examine scenarios where economic growth does not lead to development through guided discussion and examples. – Compare and present theories of economic growth (sector balancing and causes of growth) using charts or diagrams. – Identify and discuss indicators and causes of underdevelopment through group work and class presentations. – Analyze Rwanda's policies aimed at reducing underdevelopment and present findings. – Brainstorm the meaning, types, and characteristics of poverty and illustrate the vicious cycle of poverty using diagrams. Discuss and evaluate different strategies for poverty reduction using real-life examples.
---	---	---	--	--

	– Evaluate the ways of improving agricultural products from production to processing and marketing		– Ways of improving agricultural productivity	– Define economic development and identify its objectives and indicators through guided learning activities. – Compare economic growth and economic development using tables and real-world examples. – Conduct a mini-project analyzing a country's growth and development status and present conclusions. – Engage in reflection and discussion on how economic growth and development impact living standards and long-term progress.
--	--	--	---	---

Link to other subjects: Entrepreneurship and Business Studies: Focuses on investment and market expansion as drivers of growth Geography: Explains how climate, soil, topography, and water availability affect farming, CT (Information and Communication Technology): Supports precision farming, weather forecasting, and market information systems. Mathematics: Used to calculate yields, costs, profits, and analyze production data agriculture.

Assessment criteria: Students can appraise the effectiveness of agricultural development strategies in addressing food security, employment, and sustainable economic growth in Rwanda.

Teaching and learning materials: Textbooks and Reference, Books, Newspapers, journals, magazines, audio media, internet access and documentaries

Topic area: MACROECONOMICS			Sub-topic area: DEVELOPMENT ECONOMICS	
S6: Economics			Unit 7: INDUSTRIAL DEVELOPMENT	No. of periods: 25
Key Unit Competence: Justify the choice of industrial development strategies that best promote structural transformation and economic growth in developing countries				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the meaning, advantages and disadvantages of industrial development. – Identify the approaches of industrial development. – Describe the limitations of industrial development in Rwanda. – Distinguish between capital, labour intensive, intermediate, appropriate technology and transfer technology	– Analyse the advantages and disadvantages of industrial development. – Examine the applicability of industrial development approaches in Rwanda. – Describe the problems of industrial development in Rwanda.	– Acknowledge industrial development strategies in the economy and choose the appropriate approach for their development in Rwanda. – Contribute to industrial development in the Rwandan economy	Introduction to Industrial Development – Meaning, Advantages and Disadvantages of industrial development of industrial development – Challenges and Policy Measures in the industrial Sector of Developing Countries Industrial Development Approaches	– Scenario Analysis Scenario: Rwanda plans to build a new industrial park. Students analyze how this contributes to economic development – Scenario Analysis Rwanda plans to build a new industrial park. Students analyze how this contributes to economic development.

– Explain the difference between small scale and large scale industries – Distinguish between Import substitution industrial strategy and Export promotion industrial strategy – Identify the features, advantages, disadvantages, and limitations of appropriate technology – Describe the classification of industries in Rwanda	– Use illustrations to distinguish between capital and labour intensive technology – Suggest the appropriate technology based on the socioeconomic conditions of Rwanda.		– Technology-Based Approaches (Capital-intensive technique, Labour-intensive technique, Intermediate technology, Appropriate technology, Technology transfer, Technological development) – Scale of Production (Small-scale industries, Large-scale industries) – Trade-Oriented Industrial Strategy (Import substitution industrial strategy, Export promotion industrial strategy)	– Debate “Industrial development benefits Rwanda more than it harms it.”
Link to other subjects: Mathematics: Used to analyze production data, costs, profits, and growth trends, Geography: Examines how location, resources, and infrastructure influence industrial zones, Business Studies: Focuses on entrepreneurship, marketing, and management within industrial enterprises				
Assessment criteria: Students can justify the choice of industrial development strategies that best promote structural transformation and economic growth in developing countries				
Teaching and learning materials: Visual Aids: Suggested Charts and Diagrams: Flowchart of international trade process, Venn diagram comparing free trade vs protectionism, Mind map linking globalization to various subjects, Bar graph showing Rwanda's export trend				

Topic area: MACROECONOMICS			Sub-topic area: DEVELOPMENT ECONOMICS	
S6: Economics		Unit 8: DEVELOPMENT STRATEGIES		No. of periods: 22
Key Unit Competence: Critically evaluate development strategies and their effectiveness in promoting sustainable economic growth and improved living standards.				
Learning objectives			Content	Learning activities
Knowledge and understanding	Skills	Attitudes and values		
– Explain the meaning and objectives of development strategies – Identify the need for education in an economy. – Explain the need for foreign aid in an economy.	– Assess the contribution of different development strategies to the country's economy – Examine the role and challenges of education as a component of development strategies in Rwanda. – Suggest ways of improving efficiency in education.	– Advocate for measures that promote different development strategies for economic development in Rwanda. – Acknowledge the importance of reducing over reliance on foreign aid in development.	Meaning and Objectives of development strategies Education as a Component of Development Strategies – Meaning and Types of education – Role of Education in Economic Development – Problems and Policy Measures in the Education Sector of Developing Countries Foreign Aid as component of Development Strategies	– Through individual documentary research on different development strategies in Rwanda, Students discuss in manageable groups the contribution of different development strategies to the economic development of Rwanda. Students present their findings to the class. – In small groups, students discuss the appropriate measures to promote greater efficiency in education in Rwanda.

– Identify the role of infrastructure on the economic development of Rwanda. – Explain the measures of promoting education	– Assess the contribution of foreign aid to the development of Rwanda. – Examine the problems of over dependence on foreign aid in the development of a country. – Analyze the role of infrastructure in economic development	– Appreciate the role of infrastructure in the economic development	– Meaning, Forms and Types of foreign aid – Need for foreign aid and problems of relying on it. – Utilization of aid and reasons why donor countries are reluctant to give aid. Infrastructure as a Component of Development Strategies – Meaning and Types of infrastructure – Contribution of infrastructure to the economic development	– Through debate, students assess the dangers of over relying on foreign aid in the development process of their country. – Provide small groups of students with case studies on infrastructure in Rwanda. Students then brainstorm the role of infrastructure on economic development.

Link to other subjects:

- **Geography:** (Spatial distribution of development projects, resource planning)
- **Entrepreneurship:** (Planning for business and economic growth)
- **Mathematics:** (Data analysis, statistics for economic indicators)
- **Entrepreneurship:** (Planning for business and economic growth)
- **ICT:** Use of data visualization, research on online resources
- **History:** Evolution of Rwanda's economic policies

Civic Education: National unity, accountability, and citizen participation in planning.

Assessment criteria: *Students can evaluate the key features of the Rwandan economy in order to contribute to activities that promote economic development.*

Teaching and learning materials:**– Print & Text Resources:**

- Rwanda Vision 2020 and 2050 documents
- EDPRS I (2008–2012) and EDPRS II (2013–2018) summaries
- NST1 (National Strategy for Transformation 2017–2024)
- Rwanda Economic Development Reports (MINECOFIN, NISR)
- CBC Economics textbook and teacher's guide

Audio-Visual / ICT Resources:

- Videos or documentaries on Rwanda's economic transformation (YouTube, RBA archives)
- Infographics showing trends in poverty reduction
- PowerPoint presentations prepared by learners
- Government websites (e.g., www.minecofin.gov.rw, www.statistics.gov.rw)

Community & Experiential Resources:

- Guest speakers (local government planners, district officers)
- Field visits to local development projects or cooperative initiatives
- Surveys and interviews with community leaders
